WARNING - USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.

The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.

To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

OFFER OF SALE

The items described in this document are hereby offered for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. This offer and its acceptance by the provisions stated in the detailed 'Offer of Sale' which is available upon request.

Parker Hannifin

The global leader in motion and control technologies and systems

Global Partnerships Global Support

Parker is committed to helping make our customers more productive and more profitable through our global offering of motion and control products and systems. In an increasingly competitive global economy, we seek to develop customer relationships as technology partnerships. Working closely with our customers, we can ensure the best selection of technologies to suit the needs of our customers' applications.

Electromechanical Technologies for High Dynamic Performance and Precision Motion

Parker electromechanical technologies form an important part of Parker's global motion and control offering. Electromechanical systems combine high performance speed and position control with the flexibility to adapt the systems to the rapidly changing needs of the industries we serve.

About Parker Hannifin Corporation

With annual sales exceeding \$13 billion in fiscal year 2012, Parker Hannifin is the world's leading diversified manufacturer of motion and control technologies and systems, providing precision-engineered solutions for a wide variety of mobile, industrial and aerospace markets. The company employs approximately 60,000 people in 48 countries around

the world. Parker has increased its annual dividends paid to shareholders for 56 consecutive years, among the top five longest-running dividend-increase records in the S&P 500 index. For more information, visit the company's web site at <http://www.parker.com>, or its investor information site at <http://www.phstock.com>

Electromechanical Automation

Global products with local manufacturing and support

Global Product Design

Parker Hannifin has more than 40 years' experience in the design and manufacturing of drives, controls, motors and mechanical products. With dedicated global product development teams, Parker draws on industry-leading technological leadership and experience from engineering teams in Europe, North America and Asia.

Local Application Expertise

Parker has local engineering resources committed to adapting and applying our current products and technologies to best fit our customers' needs. Parker's engineering resources also extend to the development and manufacture of complete systems for continuous process and motion control applications.

Manufacturing to Meet Our Customers' Needs

Parker is committed to meeting the increasing service demands that our customers require to succeed in the global industrial market. Parker's manufacturing teams seek continuous improvement through the implementation of lean manufacturing methods throughout the process. We measure ourselves on meeting our customers' expectations of quality and delivery, not just our own. In order to meet these expectations, Parker operates and continues to invest in our manufacturing facilities in Europe, North America and Asia. This allows us to minimize transportation time and cost and to be able to respond more quickly to customer needs.

SSD Drives Division Manufacturing

Parker SSD drive products are manufactured globally to provide our customers with quality products at a competitive price point. In addition to factory-direct support, Parker provides sales assistance and local technical support through a group of dedicated sales teams and a network of authorized systems integrators, field service engineers, and technical distributors across the globe. Solutions to Improve Productivity, Increase Flexibility and Save Energy

Process Productivity and Reliability

Parker brings together the technology and experience required for continuous process applications across many industries. AC and DC variable speed drive products combined with application-specific function block-based configuration software ensure precise speed control and reliable performance. Parker combines more than 30 years of adjustable speed drive application experience with a global sales and support network to help you increase productivity and efficiency.

Energy Efficiency and Clean Power

Parker has developed the technology to maximize the efficient use of energy in industrial, mobile and commercial environments.

Hybrid Vehicle Technology

Parker has adapted its electric drive technologies for use in hybrid and electric vehicles, including mass transit, utility trucks, passenger vehicles, and watercraft. Examples include inverters and motor drives, charging systems, export power, and electric motors and generators. For more information, visit <http://hev.parker.com>

Energy Savings for Pumps, Fans, and Compressors

Parker has the drive technology to help you realize significant energy savings in the operation of pumps, fans and compressors in both industrial and commercial applications, including:

- Commercial refrigeration
- Water and wastewater treatment
- Building automation
- Industrial processes
- Hydraulic systems

Power Generation and Conversion

Using proven inverter technology, Parker has developed numerous solutions for the conversion of energy for commercial use from a variety of sources, including wind, wave and energy storage devices. More at www.parker.com/gridtie

Motion Control Systems for Total Production Flexibility

Parker's electromechanical automation customers enjoy total production flexibility in their general and precision motion control applications. Complete packaged linear positioning systems, coupled to servo and stepper drives and control, enable our customers to develop a complete motion solution with one partner. Parker provides the products for a wide range of motion needs - power, speed, travel, force - with easy to use controls designed to work on multiple control and communication platforms. Additionally Parker's products can be easily customized to suit specific applications.

Parker SSD Drives Service and Support

Preventative maintenance

Improve plant reliability and minimize production losses with Parker SSD.

With over 30 years experience of designing, manufacturing and supporting an extensive range of drives and motors, Parker SSD Drives ideally placed to offer the best possible levels of support to the customers.

With a variety of service and maintenance contracts available to choose from, it is possible to create a custom service package that meets your production needs and ensures that costly downtime is kept to a minimum and plant efficiency is kept at its optimum.

Training

Helping our customers become self-sufficient

Professional product training guarantees that your engineers and technicians are fully conversant and confident with the equipment that controls your process. With a number of different classroom and web-based courses running throughout the year covering all aspects of our drives range and meeting the specific needs of designers, programmers and maintenance staff, Parker SSD Drives provides its customers with the necessary skills to enable them to support their own equipment without the need of external assistance. If it is not convenient to travel to our training facility in Charlotte NC, we will come to you. Ask about our custom on-site training programs.

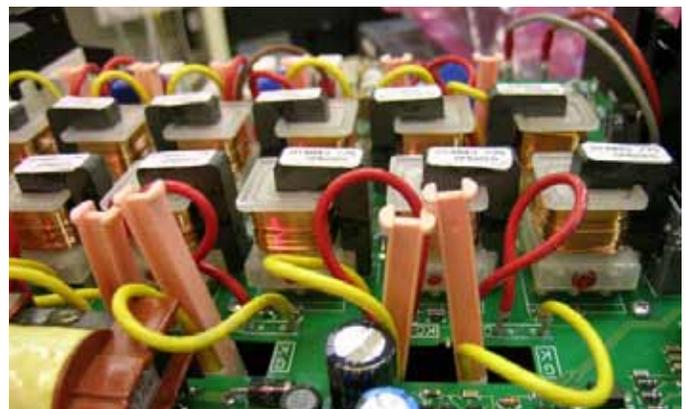

For a full list of currently available courses, please visit our website or ask your local territory manager.

Product Repairs

Any product returned to the dedicated repair facility at our Charlotte NC manufacturing facility undergoes a full visual inspection, professional repair and thorough test. In addition the equipment is updated to the latest relevant build standard and all parts replaced carry a warranty. For urgent situations, we offer an option for quick turnaround.

- **Repair using production parts**
- **Build standard update**
- **Standard or optional full diagnostic report**
- **Rapid turn around options**

Parker SSD Drives Service and Support

Field Service and Commissioning

A dedicated team of Parker SSD field service engineers strategically located across the country are available for on-site services.

- **System and drive commissioning and start-up**
- **Repair and replacement of components**
- **Preventative maintenance audits**
- **Software updates and upgrades**
- **Drive and PLC programming**

Call (704) 583-8134 to schedule Field Service

Technical Phone Support

You can count on excellent telephone support from our factory located team of product experts. We do not use an off-site call center, so you can be assured that any technical issues will be dealt with promptly and efficiently by experienced Parker SSD product support engineers.

- **Installation and set-up assistance**
- **Troubleshooting**
- **Spare and replacement part recommendations**
- **System optimization**
- **After-hours support**

Call (704) 602-6062 or email techsupport.us.ssd@parker.com for Technical Support

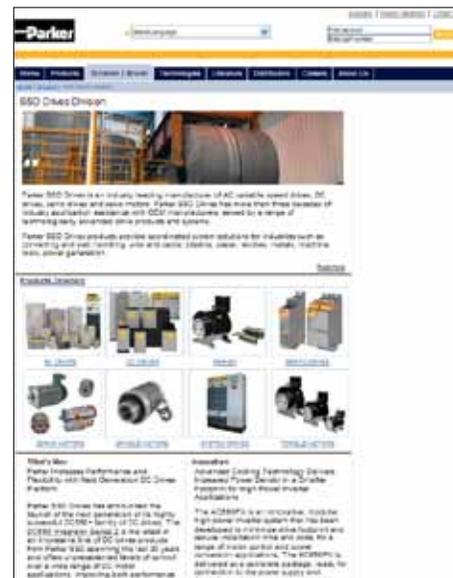

On-line Resources

Delivering information whenever you need it, our website is a valuable source of additional information and provides access to a wide range of documentation at anytime

- **Technical documentation, datasheets**
- **Product hardware and software manuals**
- **Legacy product manual archive**
- **Application notes and case studies**
- **Communication option files**
- **Software downloads and updates**
- **CAD files and ePlan macros**

Parker SSD Drive Systems Capabilities

Engineered Solutions

Systems Build Capabilities

For customers preferring the convenience of more support in the design and implementation of their control systems, Parker SSD Drives and our network of integrators offer a complete in-house design and build service, enabling you to focus on your core competencies.

Based on the fundamental principles of application expertise, quality, reliability and safety, Parker's systems team are able to undertake all aspects of an electrical control system project, from pre-design specification to on-site installation and cabling services.

By allowing Parker or one of our qualified integrators to undertake the design, build, programming and commissioning of your motor control system, you can be

assured that every aspect of the design, from environmental considerations through component selection to mounting of products has been carefully considered and allowed for.

Fully documenting a complete control system can be a daunting task for many equipment manufacturers, again Parker are on hand to help by providing complete electrical schematic and single line drawings as well as installation, maintenance and operating instructions.

As an accredited systems builder, Parker SSD Drives are also able to undertake the certification process required to enable systems to be put into service in any number of industrial markets.

Total Project Support

From concept to installation and beyond, Parker SSD Drives and our integrator network have a full range of complimentary capabilities to provide as much or as little support to your own team's expertise as you need. With a team of highly qualified and experienced design, build and service engineers, we take the risk out of any capital project by ensuring that all stages of the project are managed and executed precisely to your requirements.

Holding certification to the latest quality standards (ISO 9001 - 2008) means that as a customer, you can be assured of reliable, repeatable quality of design, build and documentation.

Integrators

Parker SSD Drives is pleased to be backed by an extensive array of systems integrators with a plethora of controls experience. Each of our integrators has their own knowledge base in specific fields which allows us to provide support to a broad spectrum of markets. Our integrators offer a means for you to work with local engineering, service and support companies who pride themselves on catering to your facilities needs by improving system processes, eliminating downtime or simply helping you bring new products to market.

Together, we can take control of your applications. As well as your costs, design, quality, delivery, installation, after-sales support ...

Whether you're looking for a single drive in an enclosure for basic speed control, or a multi-bay automated drive system for complex control of a dockyard crane, high-speed printing machine or steel rolling mill, Parker Hannifin's SSD Drives Division has the expertise to deliver. Partnering with Parker SSD provides you with access to a host of additional services, all supplied to the same exacting standards as our AC,DC, systems and servo drive products. So relax and let Parker SSD take control of your panel-build, installation, commissioning and aftersales needs.

ENGINEERING YOUR SUCCESS.

Variable Speed AC Drives

Range Overview Fractional to 2000 HP

Global AC Drive Solutions to Improve Productivity and Save Energy

Parker assists its customers in improving productivity and reducing energy consumption with a comprehensive, range of AC drives and drive systems. Parker AC drive products are sold, supported and serviced worldwide, with solutions from simple speed control to complex coordinated process control. Parker AC drive products are easy to configure and commission, with simple but flexible function block-based configuration tools and connectivity with all major industrial fieldbus networks.

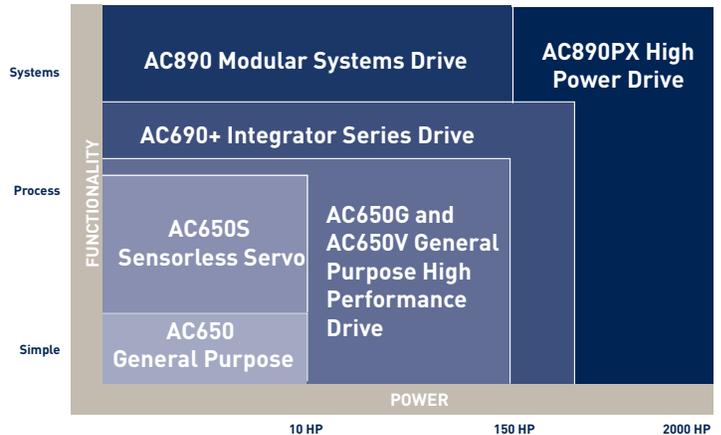

Energy Savings Using Variable Speed Drive Technology

The application of variable speed drives to traditional fixed speed applications, such as in pumps, fans and compressors, can yield up to 30% energy savings. In fact, many power utilities and government agencies provide financial incentives to invest in VSD technology. Parker's AC650 and AC650V General Purpose AC drives make these savings possible.

Improving Process Productivity and Reliability

Parker AC drive products also have the functionality, designed and refined from decades of experience, to provide the precise, coordinated speed control, often among multiple motor axes, to ensure process line success.

AC Drives Product Range Overview

With high speed communication, easy to use configuration tools and HMI control solutions, Parker AC drives can handle the most complex process control applications.

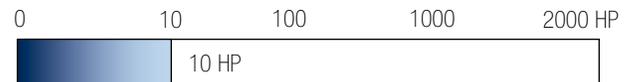

Clean Power for Additional Energy Savings

Parker's AC drive products are frequently to be found at the heart of clean power solutions through Active Front End and line regeneration technology, producing additional energy savings through power factor control.

General Purpose AC Drives: AC650 Series

The AC650 is a simple, compact, cost effective solution to basic Volts/Hertz open-loop motor speed control applications to 10 HP, such as:

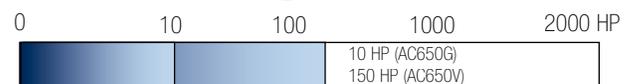

- Conveyors
- Pumps and fans
- Machine spindles

High Performance AC Drives: AC650G/V Series

The AC650G and AC650V expand upon the AC650 and benefits from the addition of sensorless flux vector control. This makes them ideally suited for applications up to 150 HP where improved speed regulation of variable loads and higher starting torques for high inertia systems is required.

- Centrifugal pumps
- Industrial blowers and fans
- Mixers

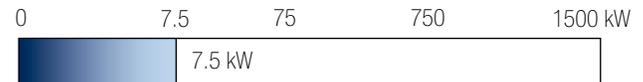

Variable Speed AC Drives

Range Overview Fractional to 2000 HP

Compact Drive for Sensorless Servo Control: AC650S Series

The AC650S series is designed to save energy in general purpose applications by replacing induction motors by more efficient permanent-magnet motors. Easy to commission and maintain, it controls the motor without a speed sensor. The AC650S is an effective solution where:

- Energy savings are required: pumps, fans, hydraulic systems, compressors
- Compactness is required: machine tools, packaging machinery, conveyors, winders/unwinders

High Performance Drives for Integrators: AC690+ Series

The AC690+ Integrator series provides high performance motor control for more complex or demanding applications up to 1500 HP. Available with multiple communications and control options for flexibility. Typical applications include:

- Multi-motor drive systems for process lines
- Distributed systems with communications
- High performance test equipment including 4-quadrant regenerative operation

Modular AC Systems Drives: AC890 Series

The AC890 Series is a range of modular AC drives, designed to minimize space and maximize performance in multiple axes applications. This AC890 Series can provide torque, speed and position control and can be configured to control permanent magnet servo motors in addition to induction motors. Available as stand-alone or common bus DC modules. Typical applications include:

- Printing machinery
- Converting machinery: coating, cutting, laminating
- High performance multi-axis machinery including 4-quadrant regenerative operation

High Power AC/Servo Drives: AC890PX

The AC890PX is a high power modular systems drive designed for industrial and power conversion applications. Available as a standalone drive or as part of a high power drive system, the AC890PX features removable phase and control modules, which allow for simple servicing and flexible system design. Power output to 1800 HP. Typical applications include:

- Extruders
- Pumps and Fans
- Mixers, centrifuges
- Engine dynamometers
- Power conversion inverters

Together, we can drive your productivity up and your energy costs down.

It's widely acknowledged that fitting variable speed drives in pump & fan applications can lead to lower energy consumption, thereby reducing energy bills. Often overlooked are the improvements they deliver to plant performance and reliability. Bearing and belt life, filter blockages and plant uptime are all improved thanks to a reduction in mechanical stresses during start and stop cycles leading to improved productivity and lower maintenance costs. When you partner with the world's leading diversified manufacturer of motion and control technologies, expect to profit from our expertise and experience.

ENGINEERING YOUR SUCCESS.

General Purpose AC Drives

AC650 Series AC Drive

0.3 HP - 10 HP

Description

Whether you need to control a conveyor belt, fan, pump, machine spindle or other general purpose application, the AC650 delivers reliable, cost-effective voltage/frequency speed control of your motor.

Designed with simplicity in mind, the AC650 comes in a compact format with DIN rail mounting as standard allowing easy integration into any electrical control panel.

The operator/programming keypad comes with each unit, but can be removed after setup to prevent unauthorized changes to inverter configuration.

For simple motor speed control up to 10 HP, the AC650 is an easy to use, economical, out of the box solution that will have your system up and running in no time.

Features

Integrated operator keypad provided standard with an option for remote mounting

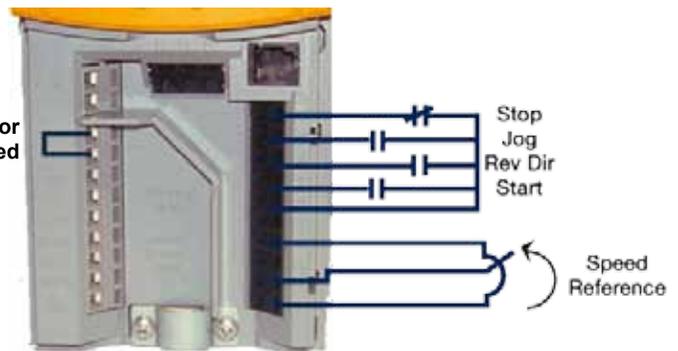

Pre-programmed Macros allowing quick and simple drive setup

6514 cloning module (option) allows easy back-up and transfer of parameters between different drives

DIN rail mounting for easy integration into any electrical cabinet

Integrated EMC filter ensures compliance while maintaining a compact footprint (optional)

Jumper if thermistor connection is not used

Flexible I/O including analog and relay output and motor thermistor input allowing greater control options

Illustration for reference only...consult installation manual for complete connection diagram

www.parker.com/ssdusa/ac650

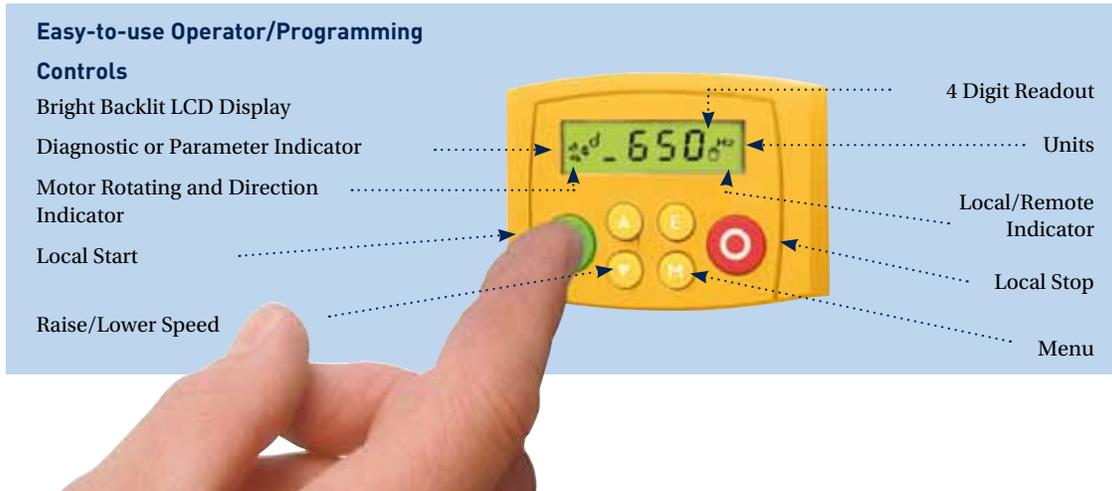

General Purpose AC Drive

AC650 Series AC Drive

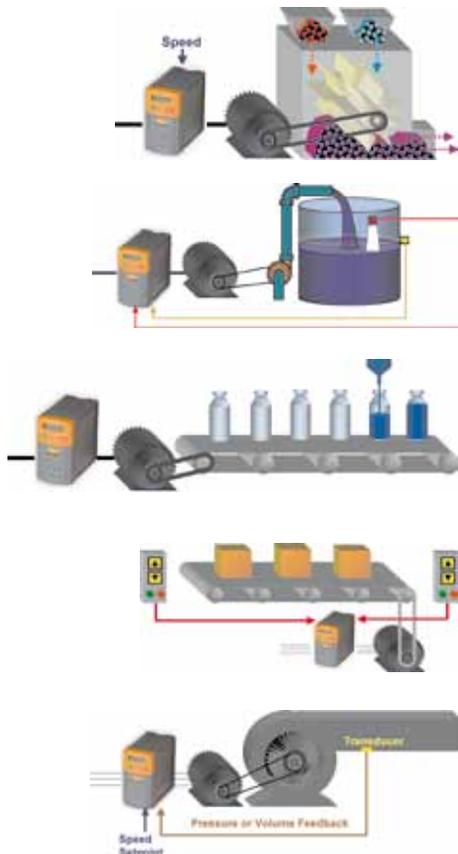

0.3 HP - 10 HP

Features

Status, diagnostics, and control through the operator keypad

Simplified operation through the use of pre-programmed macros

- Simple speed control

Set speed and voltage or current with start/stop/direction control

- Manual/Automatic control

Set to run with local speed setting or from an external reference signal

- Preset speed control

Select up to 8 pre-programmed motor speeds using digital inputs

- Increase/Decrease

Increase or reduce speed using digital inputs or pushbuttons for motorized potentiometer emulation

- PID Control

Control the pressure, flow, temperature or any process variable with transducer feedback

General Purpose High Performance AC Drives

AC650G/V Series AC Drive

0.3 HP - 150 HP

Description

The AC650G and AC650V expand upon the simple, no-fuss philosophy of the AC650 and provide reliable, robust motor control from 0.3 HP through to 150 HP. With the addition of sensorless flux vector technology, the AC650G/V allows improved motor control at lower speeds, better speed regulation of variable loads and higher starting torques for high inertia systems. The variable torque configuration option above 7.5 HP makes the AC650V ideally suited to energy saving in pump and fan applications. Simple to install and wire, the AC650G and AC650V use the same configuration software as the rest of the AC drive products.

Features

- The AC650G and AC650V offer the same high level of specification as the AC650 and also include:
- High torque sensorless vector control mode for advanced motor control
- Selectable constant torque or economical variable torque rating for centrifugal pump and fan applications, allowing optimum inverter sizing to suit the application
- Fully configurable with **DSE Lite** graphical software tool provided at no additional charge
- Additional user configurable I/O points offering increased control capabilities
- Additional PROFIBUS communications options for integration into PLC systems
- Wall and panel mounting options above 10 HP
- Extended power range to 150 HP makes the AC650V suited to a wide of uses
- Compact size allows high power density in panel and systems applications

Technical Specification

AC650-AC650G/V Series AC Drive

Power Supply	Single Phase Input Units 220-240 VAC +/- 10%, 50-60 Hz +/- 5% Three Phase Input Units 380-460 VAC +/- 10%, 50-60 Hz +/- 5%
Operating Temperature	CT: 0°C to 45°C (0-40°C w/top cover) VT: 0°C to 40°C (0-35°C w/top cover) Derate 2% per degree C to max of 50°C
Storage Temperature	-25°C to 55°C
Enclosure Rating	With top cover: UL (c-UL) Type 1/IP20 Without cover: UL (c-UL) Open Type/IP20
Altitude	Up to 1000m ASL (derate 1% per 100m to 2000m max)
Humidity	Max 85% at 40°C non-condensing
Atmosphere	Non flammable, non-corrosive, dust free
Climatic Conditions	Class 3k3 as defined by EN50178 (1998)
Vibration	Test Fc of EN60068-2-6 10Hz<=f<=57Hz sinusoidal 0.075mm amplitude 57Hz<=f<=150Hz sinusoidal 1g 10 sweep cycles per axis on each of three mutually perpendicular axis
Overload	Constant torque rating: 150% for 30 seconds Variable torque rating: 110% for 30 seconds
Output Frequency	0-240 Hz (AC650), 0-120 Hz (AC650V)
Analog Inputs	2; Speed Control 0-10V, 0-10V or 4-20mA
Analog Outputs	1; User configurable output frequency/load 0-10V (10mA maximum loading)
Digital Inputs	AC650 - 3, AC650V - 5 ; User configurable Start/Stop/Direction/pre-set speeds (8)
Digital Inputs / Outputs	AC650 - 1, AC650V - 2 ; User configurable as inputs or outputs

Digital Relay Outputs	1; Relay output 4A @ 240V All digital outputs configurable for: At (not at) speed At (above) minimum speed Running (stopped) Healthy (tripped) Above (below) pre-set load
Motor Thermistor Input	Standard, supports positive temperature coefficient (PTC) "Type A" thermistor
Power Supply Outputs	24VDC (50mA) - Digital I/O Supply 10VDC (10mA) - Analog reference supply
Communications Options	RS485/RS232 - AC650G/V and AC650 Profibus - AC650G/V only

Standards

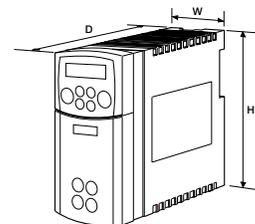

The AC650 and AC650G/V Series AC drives meet the following standards when installed in accordance with the relevant product manual.

- CE Marked to EN50178 (Safety, Low Voltage Directive)
- CE Marked to EN61800-3 (EMC Directive)
- Units listed in this catalog are UL listed to US Standard UL508C and cUL Listed to Canadian Standard C22.2 #14

* To delete brake switch, change second to last character from "B" to "N" (Frames D, E, F).

To add RFI filter to AC650 or AC650V, change last character from "N" to "F" (Frames 1, 2, 3 only). For AC650G, change 14th character.

Units with character "C" in third-to-last position are chassis drives.

Overload rating is 150% for 30 seconds for Constant Torque, or 110% for 30 seconds for Variable Torque.

Application Profile

Energy Savings - Fan applications

Parker SSD AC650V Drives help British Airways achieve 95% energy reduction for air handling system

Summary

The environmental control systems managing the ambient temperature for each of British Airways' flight simulator cells contained fixed-speed motor-driven air handling units. The fan drive motors operated continuously at maximum speed, regardless of demand or simulator use, which accounted for a significant proportion of the energy consumed by each cell and also led to increased wear and tear on components such as belts, bearing and filters.

Parker SSD Drives' AC650V General Purpose High Performance AC drives were added to the air handling systems and connected to a new building management system, producing significant energy savings of 95% and reducing maintenance, including air filters and motor components. Results were immediate, with a payback period of under two years.

Benefits

- **95% reduction in energy consumption**
- **Efficient speed control of fan drive motors**
- **Less wear and tear of mechanical components**
- **Reduced maintenance and increased system availability**
- **Communication to BMS system allows instant changes to be implemented**
- **Simple interface allows for future modifications**

Parker SSD Drives Solution

AC650V Drive

- Easy to configure, even for more complex applications
- Retrofittable in existing motor applications
- Industry compatible I/O and communications
- Broad power range to 150 HP

Engineered Solution

- Integration with external control system
- Available in IP54 'Packaged Drive' format
- Local technical support

Compact Drive for PMAC Sensorless Control

AC650S Series

0.25kW - 7.5kW

Description

The AC650S series is designed to save energy in general purpose applications by replacing traditional three phase induction motors with more efficient and physically smaller permanent magnet AC (PMAC) motors like the NX series.

Easy to commission and maintain, and with a similar look and feel to

the AC650 and AC650V, it provides simple speed and direction control of the motor without the need for a feedback device and the associated wiring.

The AC650S is available in three frame sizes, covering applications up to 1.5kW with 230V supply and up to 7.5kW with 460V three-phase supply.

AC650

Side-by-side mounting

reduces cabinet space, increases power density on panels.

Energy savings achieved when using a permanent-magnet motor instead of an induction motor can amount to up to 12%, thanks to the higher efficiency of permanent magnet motors.

The AC650S comes with one **PID controller**. It can be set to control process parameters like pressure or flow rate.

A **cloning module** is available as an option for **easy maintenance**. It allows 10 drive configurations to be saved without a PC.

Sensorless motor control removes the need for a speed sensor, which improves the system reliability and reduces cost.

Easy commissioning thanks to built-in application macros for the most common applications and free setup wizard.

Option for **Built-in filter** for EMC compliance to EN61800-3.

Typical applications

Used in combination with AC650S drives, Parker NX and EX Series permanent magnet motors are available as alternatives to induction motors in the following applications:

- When **energy savings** are important: conveyers, fans, pumps, blowers, hydraulic systems, extruders...

- In **compact machines**, when compact drive solutions are required or where electrical enclosure space is limited: machine-tools, packaging machines, winders/unwinders, special-purpose machines ...

Compact Drive for PMAC Sensorless Control

AC650S Series

0.25kW - 7.5kW

Energy savings and compact size

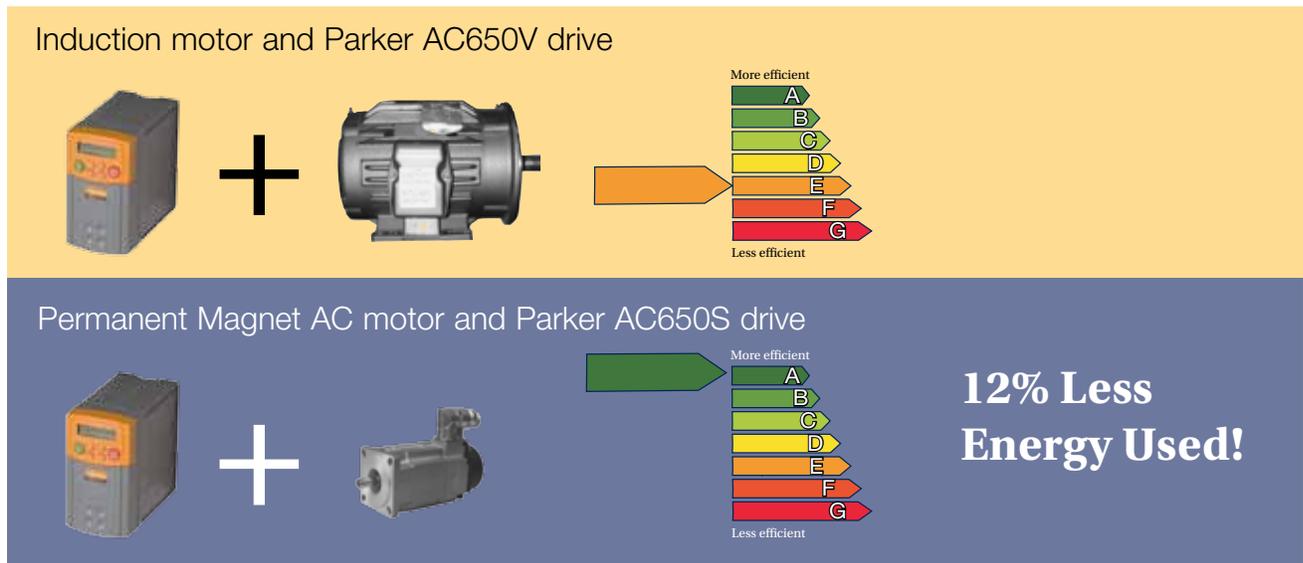

The AC650S Compact PMAC drive series features an advanced sensorless control algorithm for controlling permanent-magnet AC motors.

delivers impressive performance and high energy efficiency, which in turn leads to lower energy usage than with conventional induction motors.

machines when compared to standard induction motors of the same size. In some cases PMAC motors can be as much as 75% smaller than their induction motor equivalents.

When used with Parker's high efficiency permanent-magnet motors, the AC650S

The use of PMAC motors also enables machine builders to design smaller

Extremely compact solution for smaller machines

Parker PMAC motors have high power density, and are up to 75% smaller than the same power induction motors, which enables you to make ultra-compact machines. Furthermore, compared to induction motors, PMAC motors are available with a very economical brake option and have no need for force ventilation.

For a complete selection of Parker PMAC servo motors, please see page 114.

Minimal electrical enclosure space requirements

The AC650S is one of the smallest drives of its kind on the market today. Leading thermal design and management enables the AC650S to

be mounted side-by-side with other AC650 series drives in the electrical cabinet. This in turn reduces the size and cost of the enclosure and helps

to improve the overall envelope of the machine, making more compact designs possible.

Compact Drive for PMAC Sensorless Control

AC650S Series

0.25kW - 7.5kW

Technical Specification

Power Supply	Single Phase Input Units: 220-240 VAC +/- 10%, 50-60 Hz +/- 5%
	Three Phase Input Units: 380-460 VAC +/- 10%, 50-60 Hz +/- 5%
Operating Temperature	CT: 0°C to 45°C (0-40°C w/top cover) VT: 0°C to 40°C (0-35°C w/top cover) Derate 2% per degree C to max of 50°C
Storage Temperature	-25°C to 55°C
Protection	IP20
Altitude	Up to 1000m ASL (derate 1% per 100m to 2000m max)
Humidity	Max 85% at 40°C non-condensing
Atmosphere	Non flammable, non-corrosive, dust free
Climatic Conditions	Class 3k3 as defined by EN50178 (1998)
Vibration	Test Fc of EN60068-2-6 10Hz<=f<=57Hz sinusoidal 0.075mm amplitude 57Hz<=f<=150Hz sinusoidal 1g 10 sweep cycles per axis on each of three mutually perpendicular axis
Overload	150% for 30 seconds
Output Frequency	0-500 Hz
Analog Inputs	2; 0-10V, 0-10V/4-20mA
Analog Outputs	2; 0-10V, load <10mA
Digital Inputs	5 ; User configurable 15V to 24VDC
Digital Relay Output	1; Relay output 4A@240V
Motor Thermistor Input	Standard PTC "Type A" supported

User Selectable pre-programmed application macros	Basic speed control voltage or current source speed demand with digital start/stop and direction.
	Manual/Auto control switch between a local or remote speed demand signal
	Preset speeds select up to 8 pre-programmed speeds selected by digital inputs.
	Raise/Lower control increase and decrease speed from raise / lower digital inputs.
	PID control control pressure, flow, temperature or other variable by monitoring transducer feedback
Programming port	RS232 - standard

Standards

The AC650S series of AC drives meets the following standards when installed in accordance with the relevant product manual:

- CE Marked to EN50178 (Safety, Low Voltage Directive)
- CE Marked to EN61800-3 (EMC Directive)
- Units listed in this catalog are UL listed to US Standard UL508C and cUL Listed to Canadian Standard C22.2 #14

AC650/AC650G/AC650V/AC650S Series AC Drive

Cloning Module

Description

The cloning module can be used with all drives in the AC650 family. It allows the user to store up to 10 separate drive configurations which can then be transferred between different drives. The configurations can be mapped between different drive sizes. This is an invaluable tool for commissioning or plant maintenance personnel allowing drives to be backed up and re-configured simply and easily.

Part Number	Description	Suitable for
6514/00	Cloning Module	AC650/AC650G, V, S

RS485 Modbus Interface

Description

The RS485/RS232 communications interface provides serial data communication, allowing an AC650G/V or AC650S drive to connect to a Modbus RTU network as a slave station.

Features

- Protocols : ModBus RTU or EI-ASCII
- Compatible with AC650V/650S versions 4.x and above
- Connection by shielded twisted pair cable (RS485)
- Connection by shielded 3 core cable (RS232)
- Configuration of input function blocks
- Baud rate configurable by software
- Slave address configurable by software
- Direct access to all drive parameters

Product Details

Part Number	Description	Suitable for
6513/E100/00	RS485/RS232 Communications Interface	AC650G, V, S Frames 1, 2, 3

Operator Keypads

Description

A standard local keypad with LCD display, used for basic drive operation and parameter setting, is provided with every drive. Keypad is removeable, and may be remote mounted with the addition of mounting kit and cable.

Profibus-DP Interface

Description

The PROFIBUS option supports the PROFIBUS-DP PROFIBUS protocol, designed specifically for communication between a PLC system and remote I/O.

The Profibus interface enables the drive to connect to a Profibus-DP network as a slave station.

Features

- Profibus-DP network
- Connection by shielded twisted pair
- Baud rate configurable by software up to 12M Baud
- LED indication of card and communication status
- Compatible with AC inverters AC650G/V version 4.9+

Product Details

Part Number	Description	Suitable for

Conformal Coating

For environments that have dusty, humid or corrosive atmospheres, the AC650 family can optionally be supplied with conformally coated circuit boards that improve the drive's resistance to corrosion, thereby increasing reliability and service life. Environments that typically benefit from conformal coating include:

- Water and wastewater treatment plants
- Paper and pulp processing mills
- Steel mills
- Marine and offshore
- Outdoor cranes
- Wind & wave power generation
- Food and chemical processing plants

Part Number	Description	Suitable for
Add /083 to part #	Conformal coating	AC650V Frame C-F

Vent Kit

For two largest frame sizes, optional vent ducting kits are available. These kits provide a convenient means of venting hot exhaust air from the panel-mounted AC650V drive. The kit includes a duct, attached to the top of the drive and the roof of your enclosure, and an air exhaust hood for mounting on the top of the enclosure. Mounting hardware and gasket are provided in the kit. Installation will require a rectangular hole and six mounting bolt holes to be cut through the top of your enclosure.

Part Number	Description	Suitable for

LA466717U003	Vent Kit	AC650V Frame F

Integrator Series AC Drives

AC690+ Series AC Drive

AC Drives 1 HP - 1500 HP

Description

The AC690+ Series is a single range of AC drives designed to meet the requirements of all variable speed applications from simple single motor speed control through to the most sophisticated integrated multi-drive systems.

The heart of the AC690+ is a highly advanced 32-bit microprocessor based motor control model. This provides an exceptional dynamic performance platform to which can be added a host of communications and control options, enabling you to tailor the drives to meet your exact requirements.

The AC690+ is available in 380-500V 3-phase 1 to 1500 HP and 220V-240V 1 to 60 HP, including single phase input for 1 to 3 HP.

Modes of Operation

The AC690+ can be user configured for different modes of operation:

Open-loop (volts/frequency) control

This mode is ideal for basic motor speed control, or multiple motors driven in parallel. The quick set-up menu and plain language display ensures the quickest and easiest, trouble free start up.

Sensorless vector control

High starting torque and tight speed regulation is provided by a sophisticated MRAS (Model Reference Adaptive System) motor control strategy. MRAS provides accurate speed simulation (without the need for any speed measuring transducer) by continually modelling the motor.

Closed-loop vector control

Full closed-loop flux vector performance can be achieved with the AC690+ by simply adding an encoder feedback 'technology box'. This provides 100% continuous full load standstill torque plus a highly dynamic speed loop (up to 45 Hz bandwidth); more than sufficient for the most demanding of applications.

AC690+

Line Regenerative

Some applications require full four quadrant operation or extensive braking capabilities. The AC690+ series offers an energy efficient alternative to dynamic braking resistors in its Active Front End (AFE) unit. The AFE allows regenerative power to be returned to the grid safely and efficiently, and at unity power factor. The AC690+ AFE can also be used for situations that require ultra-low harmonics. An AFE package is offered, complete with LCL filter and other required components. See page 35 for details.

Integrator Series AC Drive

AC690+ Series AC Drive

AC Drives 1 HP - 1500 HP

Features

Encoder feedback option with encoder technology box

The AC 690+ is converted from open-loop control to high performance closed-loop control by simply adding the plug-in encoder feedback technology box.

High performance systems expansion module

The optional add-on “systems” expansion module is available for more advanced applications and includes phase locking between drives and register control. It fits behind the main control board and provides the following functionality:

- 5 configurable digital Inputs/ outputs
- Converts existing 4 analog inputs to high resolution (12 bit plus sign)
- 2 encoder inputs
- 2 high speed register mark inputs

Integrated function blocks

- Winder Control
- Process PID
- Raise/Lower
- Spinning Load Start

Mechanical protection options to suit all environments

A choice of mechanical protection options allows the drive to be mounted in a variety of different operating environments.

- **IP20** - for mounting inside an electrical enclosure.
- **IP40/NEMA 1** - The optional top cover, with cable gland plate enables the drive to be directly wall or machine mounted. (Frames B to E)
- **IP54** - Ideal for mounting in aggressive environments. Higher levels of protection are available as a special build option on request. A multitude of control options can be added to the drive using our Packaged Drive service.
- **Through-panel mounting** - This option allows the drive to be mounted with the major heat producing components and heatsink outside the enclosure, keeping the electronics clean and cool. (Frames C,D, and E)

Open standard fieldbus communications

The AC690+ has a host of communication technology box options allowing seamless multi-vendor integration into networked systems using the most common industrial fieldbus communications protocols :

- Profibus-DP
- Ethernet
- DeviceNet
- Modbus RTU
- CANbus
- ControlNet
- Modbus Plus

Programming/Operator controls

The AC690+ HMI keypad comes standard with the drive, and provides access to all of the drive’s functions in a logical and intuitive manner. The readout is backlit and displays all functions in plain language and engineering units. The HMI can be mounted on the drive itself, or alternatively it can be supplied loose, with a mounting kit, for mounting remotely on a panel door, for example.

Integrator Series AC Drive

AC690+ Integrator Series AC Drive

AC Drive 1 HP - 1500 HP

Vector control with / without encoder feedback

Power ratings 1 HP - 1500 HP

Pre-programmed application Macros

Programmable over communications

Programming identical to DC590+ DC drive

Variable torque ratings

Class B EMC filters

AC690+

Technical Specification

Power Supply	380-460V ($\pm 10\%$) 3-phase 1 to 1500 HP 380-500V ($\pm 10\%$) 3-phase 2.2 to 110kW 220-240V ($\pm 10\%$) 1-phase 1 to 3 HP 220-240V ($\pm 10\%$) 3-phase 1 to 60 HP
Operating Temperature	Constant torque - 0-45°C (40°C with IP40 cover) Derate 2% per degree C to 50°C max (Frame B-F) Derate 1% per degree C to 50°C max (Frame G-J) Derate 1.5% per degree C to 50°C max (Frame K)
Altitude	Maximum altitude: 1000m (Derate by 1% for every 100m above 1000m to 2000m maximum)
Overload	Constant torque: 150% for 60 seconds, 180% for 1 second Variable torque: 110% for 60 seconds
Output Frequency	Volts/Hertz mode: 0-590 Hz Sensorless Vector mode: 0-120 Hz Closed Loop Vector mode: 0-300 Hz
Switching Frequency	Frame B: 3,6 or 9kHz Frame C, D, E and F: 3 or 6kHz All with audibly silent switching frequency
Dynamic Braking	Each drive can be fitted with an internal dynamic brake switch Frame B and C: standard Frame D,E and F: optional
Analog Inputs	4 Configurable, 10 bits (13 bits with optional system card). 0-10V, 0- ± 10 V, 0-20mA, 4-20mA
Analog Outputs	3 Configurable, 10 bits. 0-10V, 0- ± 10 V, 0-20mA, 4-20mA
Digital Inputs	7 Configurable, nominal 24VDC (30VDC max)
Digital Outputs	3 Configurable, relay contacts 3A/230 VAC
Reference Supplies	+10VDC, -10VDC, +24VDC
Motor Thermistor Input	Yes

Function Block Programming	Function block programming allows a tremendously flexible control structure to be created with ease. An almost infinite combination of user functions can be realized often alleviating the need for an external PLC. However, the drive is pre-configured so it can be used straight from the box as a standard AC drive without further adjustment.
Analog Functions	If So, summing, subtractor, multiplier, divider, if higher then lower then If, Counter, Timer
Boolean Functions	Not, And, Nand, Or, Nor, Xor, Trigger, Flip-Flop
Application Macros	Simple speed control, Forward/Reverse, Raise/Lower, Process PID, Preset speeds, Winder control.
6901 Operator Keypad	The 6901 keypad is designed for setting-up, configuring and operating the AC690+ drive. The intuitive menu navigation and parameter display is simple and easy to use. Main features: <ul style="list-style-type: none"> • Remote mounting capability on front of enclosure • Backlit display • Multilingual 2x16 alphanumeric display • Customizable display • Local Control: Speed setpoint, Start/Stop, Jog and Direction • Password protection • Quick set-up mode
Systems Expansion Module	The optional systems expansion module allows for advanced applications such as phase locking between drives and register control. Key features include: <ul style="list-style-type: none"> • 5 Additional user configurable Inputs / Outputs • 4 High resolution analog inputs (12 bits plus sign) • 2 Additional encoder inputs • 2 High speed register mark inputs • Encoder slave repeater

Integrator Series AC Drive

AC690+ Series AC Drive

K-Frame 600 HP - 1500 HP

Specifications

6 pulse Model	Power Rating	Constant torque : 600 - 1500 HP Variable torque : 700 - 1600 HP
	Supply Voltage	380-460Vac (±10%) 3-phase
	Disconnect Switch	Standard
	Input Inductance	Standard for limiting harmonic current
	Output Choke	Standard
	Operator Panel	6901 operator keypad mounted on enclosure door
12 pulse Model (option)	Harmonics	Reduced harmonic current
	Power Rating	Constant torque : 600 - 1000 HP Variable torque : 700 - 1500 HP
	Supply Voltage	380-460Vac (±10%) 3-phase
	Disconnect Switch	Standard
	Input Transformer	(not included in the enclosure) optional 2 secondaries U/D
	Operator Panel	6901 operator keypad mounted on enclosure door
18 pulse Model (option)	Harmonics	Total harmonic distortion (current) in accordance with limits of IEEE 519 (1992)
	Power Rating	Constant torque : 900 - 1500 HP Variable torque : 1000 - 1600 HP
	Supply Voltage	380-460Vac (±10%) 3-phase
	Disconnect Switch	Standard
	Input Transformer	(not included in the enclosure) optional 3 secondaries phase shifted by 20°
	Operator Panel	6901 operator keypad mounted on enclosure door

Energy Savings

Fast return on investment in pump and fan applications

Improved power factor

Flux vector control with or without encoder and V/F control

Reduced harmonics through 12 or 18 pulse coupling

Improved HVAC control

Standards

The AC690+ series meets the following standards when installed in accordance with the relevant product manual.

CE Marked to EN50178 (Safety, Low Voltage Directive)

CE Marked to EN61800-3 (EMC Directive)

Units listed in this catalog are UL listed to US Standard UL508C and cUL Listed to Canadian Standard C22.2 #14

4 Quadrant Power Module

AC690+ Integrator Series AC Drive
Active Front End Units 10 HP - 500 HP

AC690+

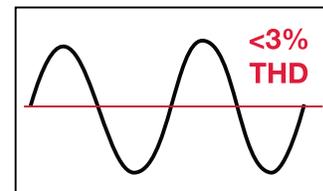

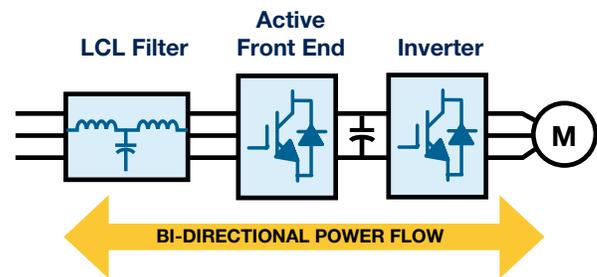

Illustration shows typical panel including AC690+ with AFE and additional system components.

Description

Many applications depend on the drive for braking torque as well as motoring torque. While dynamic braking with a resistor can be effective for lighter or lower duty cycle braking, some applications demand more braking performance than traditional D/B can provide. In addition, traditional dynamic braking using a resistor is wasteful of energy, as the potential energy in the load is dissipated as heat. By using an Active Front End (AFE) configuration, energy from the load is returned back to the power grid at unity power factor, providing extremely effective and controllable braking, as well as energy efficiency.

Applications that can benefit from line regeneration include hoists and lifts, centrifuges, continuous web processes, and dynamometer test stands. An AFE may also be used in applications that require ultra-low harmonics.

This cost effective AFE package includes pre-charge circuit and LCL filter.

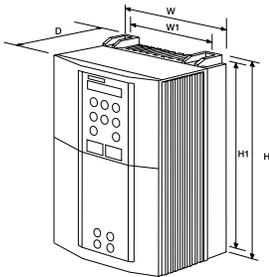

Part Number	Phases	Frame	Nominal Power (HP)	Dimensions (in)
AFE-13-LCL	3	B	13	22 x 18
AFE-26-LCL	3	C	26	28 x 22
AFE-45-LCL	3	D	45	33 x 27
AFE-85-LCL	3	E	85	46 x 34
AFE-125-LCL	3	F	125	46 x 34
AFE-167-LCL	3	F	167	46 x 34
AFE-200-LCL*	3	G	200	79 x 47 x 24
AFE-300-LCL*	3	G	300	79 x 47 x 24
AFE-350-LCL*	3	G	350	79 x 47 x 24
AFE-400-LCL*	3	H	400	79 x 47 x 24
AFE-500-LCL*	3	H	500	79 x 47 x 24

* Provided in NEMA 12 force ventilated cabinet with fans and filters

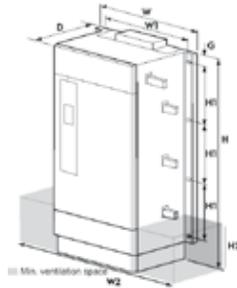

- Recovers wasted energy
- No braking resistor/No maintenance
- Ultra-low harmonics, meeting the requirements of IEEE 519
- High power factor (cos ϕ ~ 1)

AC690+

Communication Cards

AC690+ Integrator Series AC Drive

Description

The selection of available AC690+ communication “technology boxes” allow the flexibility to be connected to the most common industry standard fieldbuses.

Ethernet Communications Interface	
*Part Number: 6053/ENET/00 and 6055/ENET/00	
Supported Protocols	Modbus/TCP and Ethernet IP
Communication Speed	10/100M bits/s
Station Address	Selectable via switch or Internet Explorer
Suitable for	AC690+ version 4.7+

ControlNet Communications Interface	
*Part Number: 6053/CNET/00 and 6055/CNET/00	
Supported Messages	Polled I/O
Station Address	Selectable via Software
Suitable for	AC690+ version 4.7+

Modus Plus Communications Interface	
*Part Number: 6053/MBP/00 and 6055/MBP/00	
Supported Protocols	Modbus Plus
Cabling	RS485 2 or 4 wire
Communication Speed	1 M bits/s
Station Address	Selectable via Software
Suitable for	AC690+ version 4.7+

Devicenet Communications Interface	
*Part Number: 6053/DNET/00 and 6055/DNET/00	
Supported Protocols	DeviceNet Drive Profile Drive – Group 2 slave only
Station Address	DeviceNet Drive Profile Drive – Group 2 slave only
Suitable for Drives	AC690+

RS485/Modbus Communications Interface	
*Part Number: 6053/EI00/00 and 6055/EI00/00	
Supported Protocols	Modbus RTU, EI Bisynch ASCII
Cabling	RS485 2 or 4 wire
Communication Speed	300 to 115200 bits/s
Station Address	Selectable via Software
Suitable for	AC690+ version 4.7+

Features

- Communications cards can be factory installed into the drive, or purchased separately for installation on-site
- Dimensions H x W x D : 127mm x 76.2mm x 25.4mm
- LED indication of network and card status

Profibus-DP Communications Interface	
*Part Number: 6053/PROF/00 and 6055/PROF/00	
Supported Protocols	Profibus-DP
Communication Speed	Automatically Detected
Station Address	Selectable via Software
Suitable for	AC690+ version 1.x+

CANopen Communications Interface	
*Part Number: 6053/CAN/00 and 6055/CAN/00	
Profile	DS402
Supported Messages	SDO, PDO, NMT, SYNC
Communication Speed	20K, 50K, 125K, 250K, 500K, 1M bits/s selectable
Station Address	Selectable via Switch
Suitable for	AC690+

LonWorks	
*Part Number: 6053/LON/00 and 6055/LON/00)	
Supported Protocols	LonWorks
Delivered	with a resource file compatible with LonMaker software (or equivalent)
Suitable for	AC690+ HVAC Series version 5.1+

Apogee P1 (HVAC Series only)	
*Part Number: 6053/APOG/00 and 6055/APOG/00)	
Supported Protocols	Apogee P1
Suitable for	AC690+ HVAC Series

Metasys N2 (HVAC Series only)	
*Part Number: 6053/JMET/00 and 6055/JMET/00)	
Supported Protocols	Johnson Controls N2
Suitable for	AC690+ HVAC Series version 4.6+

* Refer to page 39 for details of drive frame compatibility

HTTL Encoder Feedback Card

AC690+ Integrator Series AC Drive

Description

The HTTL Encoder Feedback Card allows an incremental encoder to be connected to the AC690+ AC drive, allowing users to take full advantage of the integrated torque control and speed regulation functionality.

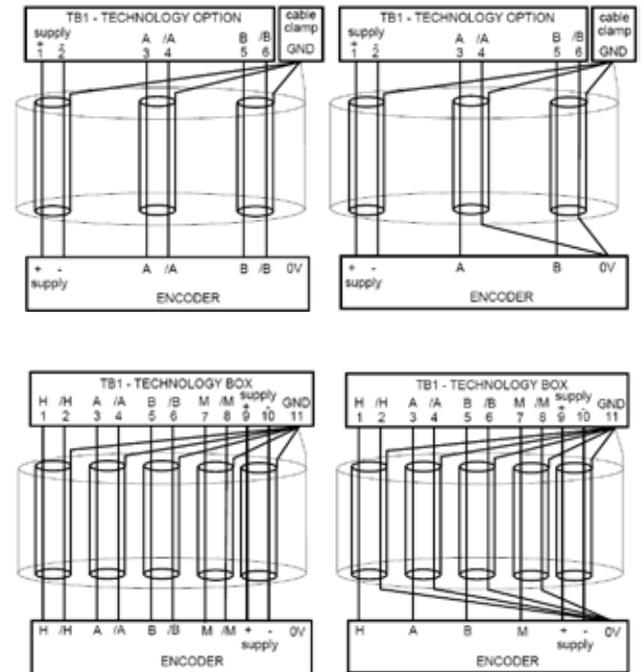

The HTTL Encoder Feedback card has the following features:

- 4 Optically isolated differential inputs A, B, M and H
- Adjustable isolated 10 - 20V encoder power output

Specifications

Maximum Input Frequency	250kHz
Receiver current consumption	≤10mA per channel
Input Format	2-channels in quadrature, clock / direction, or clock only
De-phasing	>1μs
Differential Input Voltage	10 - 30V Maximum
Encoder Power	Maximum Load: Card LA467461: 200mA or 2W Housing 6054-00: 250mA or 2.5W Voltage 10-20V software adjustable.

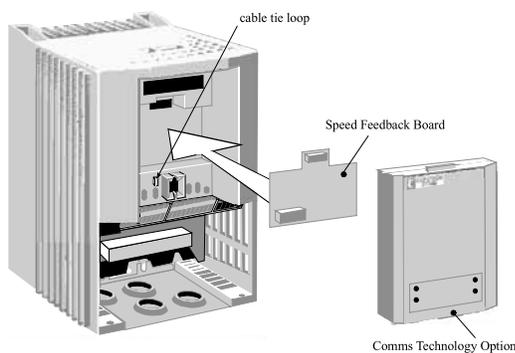

Installation and cabling

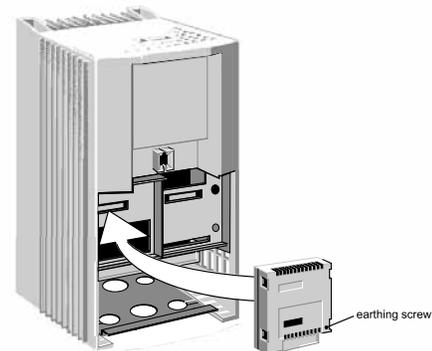

Part Numbers

Part Number	Compatible Drives
LA467461	AC690+ Frame B (690-xxxxxB...) drives
6054-00	AC690+ Frames C - K drives

AC690+ Frame B Drives

AC690+ Frames C-K Drives

System Expansion Module

AC690+ Integrator Series AC Drive

Description

With the System Expansion Module, the AC690+ can be used in more sophisticated applications, or where a small amount of automation is required to be used in conjunction with the drive.

The following features are available:

Analog Inputs AIN1-4 are become high resolution (12 bit plus sign)

5 isolated I/O points, configurable as either inputs or outputs

Variable isolated output power for encoders

Master encoder inputs (Isolated HTTL): A, A/, B, B/, Z and Z/

Slave encoder inputs (Isolated HTTL): A, A/, B, B/, Z and Z/

Slave encoder output retransmission (Isolated HTTL): A, A/, B, B/, Z and Z/.

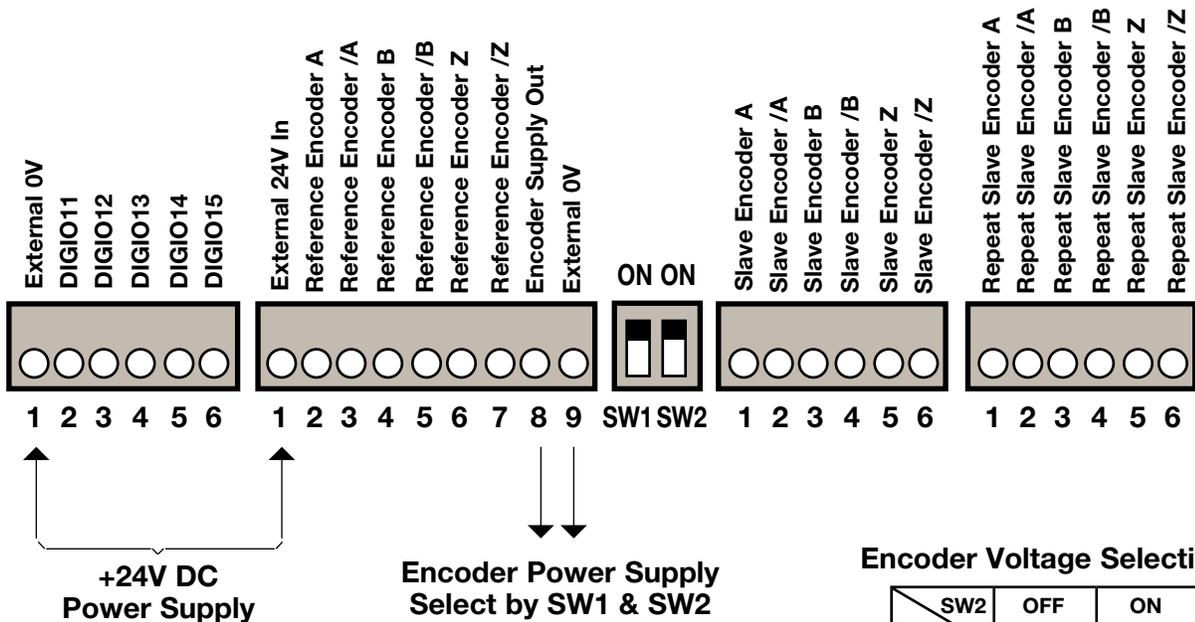

External Power Supply

An external 1 Amp 24VDC ($\pm 10\%$) supply must be connected to the card.

How to Order

Change last character of drive part number from "N" to "S".

Operator Keypads

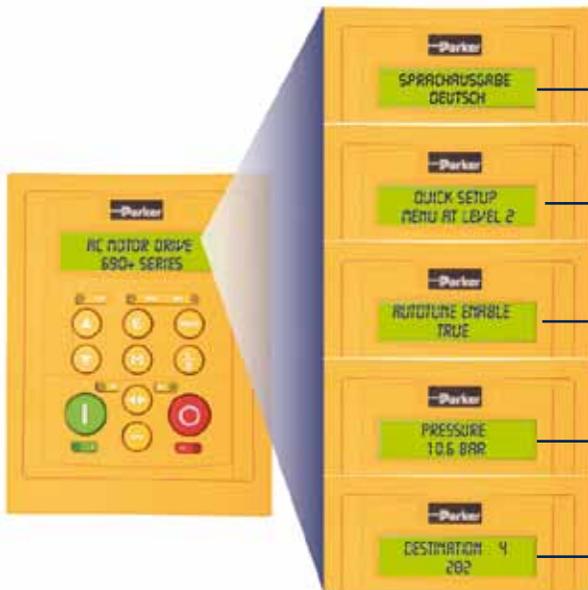

AC690+ Integrator Series AC Drive

Standard operator keypad 6901/00/G

Features

- Local motor control : start, speed, direction, diagnostics
- Operator menus and parameter configuration
- Quick setup menu
- Password protection for parameter configuration

Multilingual

English · Spanish · French · German · Italian · Portuguese · Swedish · Polish

Quick setup menu

Intuitive menus allowing easy and quick setup of the drive

Auto-tuning

Automatic tuning of motor parameters ensures maximum dynamic motor performance

Diagnostics messages

Display input and output parameters as well as drive operating units

Drive configuration

Advanced operator keypad 6911/01/00/G

Features

- 128 x 64 pixels semi-graphical resolution
- RS232 and RS485 ports
- Recording of parameters to keypad and restore to drive (Memory card 256Mb to 2Gb)

Conformal Coating

For environments that have dusty, humid or corrosive atmospheres, the AC690+ family can optionally be supplied with conformally coated circuit boards that improve the drive's resistance to corrosion, thereby increasing reliability and service life. Environments that typically benefit from conformal coating include:

- Water and wastewater treatment plants
- Paper and pulp processing mills
- Steel mills
- Marine and offshore
- Outdoor cranes
- Wind & wave power generation
- Food and chemical processing plants

Through-panel Mounting Kit

Description

This option allows the heat sink of the drive to protrude through the back panel of an enclosure or cabinet, allowing the heat to be dissipated outside of the enclosure. This mounting configuration can generally permit the use of a smaller enclosure, or elimination of the need for air conditioning inside the enclosure. Please consult the installation manual for complete information regarding thermal management requirements for the drive or drives to be used.

Dynamic Braking Kit/Vent Kit

AC690+ Integrator Series AC Drive

D/B Kit includes resistor, overload, protective cage, and enclosure top or panel mounting

*NEMA ICS 3-301.62 Dynamic braking stop option. Minimum 100% full load torque from base speed with 6x motor inertia, and 4 stops per hour.

Keypad Blanking Cover

Description

The keypad blanking cover kit may be used when local keypad is not installed. Kit includes light pipes for LED's.

Part Number	Description	Suitable for
LA500326U001	Blank Cover	AC690+ Frame B-J

Vent Kit

Description

For the two largest frame sizes, optional vent ducting kits is available. These kits provide a convenient means of venting hot exhaust air from the panel-mounted AC690+ drive. The kit includes a duct, attached to the top of the drive and the roof of your enclosure, and an air exhaust hood for mounting on the top of the enclosure. Mounting hardware and gasket are provided in the kit. Installation will require a rectangular hole and six mounting bolt holes to be cut through the top of your enclosure.

Part Number	Description	Suitable for
LA466717U004	Vent Kit	AC690+ Frame E
LA466717U003	Vent Kit	AC690+ Frame F

Modular Systems Drives

AC890 Systems Drive

1 HP - 1500HP

Description

The AC890 is a compact, modular systems-capable drive engineered to control speed and position of open-loop and closed-loop, single- or multi-motor AC induction or servo motor applications.

Features

The AC890 can be configured for 5 different modes of operation

Open-loop (volts/frequency) control

This mode is ideal for basic, single or multi-motor speed control.

Sensorless vector control

With its ultra high performance sensorless vector algorithm, the AC890 delivers a combination of both high torque and close speed regulation without the need for any speed measuring transducer.

Closed-loop vector control

Full closed-loop flux vector performance can be achieved with the AC890 by simply adding an encoder feedback 'technology box'. This provides 100% continuous full load standstill torque, plus a highly dynamic speed loop more than sufficient for the most demanding applications.

PMAC servo control

Allows the use of a PMAC motor like the TMW series, with feedback device.

Active front-end module for line regeneration

With this configuration, used in applications that require four quadrant or continuous braking operation, the regenerated energy is fed back into the grid with sinusoidal currents and unity power factor; a very low current harmonic content is achieved (THD less than 3%).

Compatible with a wide range of feedback options

The AC890 is compatible with any AC motor and virtually any speed/position feedback options. With this flexibility you may not even need to replace your existing AC motor to achieve high performance, saving you time and money.

- Incremental encoder
- EnDat 2.1 (SinCos) encoder
- Resolver

AC890 is compatible with multiple motor designs

AC Induction Motors

PMAC Brushless Motors

Torque Motors

International Standards

Complies with :

- EN61800-3 (EMC) Directive
- CE Marked to EN50178 (Low Voltage) Directive
- Units listed in this catalog are UL listed to US Standard UL508C and cUL Listed to Canadian Standard C22.2 #14, **except where otherwise noted.**

Ultra-fast control loops

- Torque loop: 62.5µs
- Speed loop: 62.5µs
- Position loop: 62.5µs

Serves the most demanding applications

Taking advantage of leading edge control algorithms running on a fast 150 Mhz microprocessor, the AC890 drive can achieve very high bandwidth control loops. This allows you to use the drive for the most demanding industrial applications e.g. printing, registration, cut-to-length, position synchronization, rotary shear, converting and slitting.

Benefits

Integrated safety functionality

The integrated Safe Torque Off (STO) functionality offers protection against unexpected motor start-up, in accordance to EN13849-1 PLE, SIL 3 as standard.

Minimal delay between fieldbus setpoints and the control loops

Designed to integrate in existing automation systems, the AC890 features high performance ports linked directly to the fast control loops of the drive. Minimum delay exists between your digital setpoint sent through a fieldbus and the control loops.

Replacement of analog solutions

Your existing analog setpoint-based solutions can be replaced by a digital fieldbus-based solution with minimum bandwidth loss.

Flexible feedback options

The AC890 offers system designers complete flexibility in their choice of feedback technology to best suit the needs of their application.

Open standards for protection of investment

The AC890 has been specifically designed to integrate seamlessly into your automation network. To connect to your PLC or fieldbus network you can simply choose from the wide range of communication technology boxes.

Two performance levels to suit all applications :

Advanced Performance

Motion control with position control, Motion control function blocks: incremental move, absolute move, move home Section Control : line drive master ramp, winder blocks (speed and current winder), PID process, sequencer, more...

High Performance

All "Advanced Performance" features PLUS: Library of pre-engineered application specific LINK VM function blocks such as: Shaftless printing, cut-to-length, advanced winding, advanced traversing and others.

Modular Systems Drives

AC890 Systems Drive

Space saving compact footprint thanks to modular design concept

Stand Alone version (SD)

The Complete Drive

The AC890SD series Stand Alone version provides a complete AC input to AC motor output drive, with keypad and display included. Perfect solution for single motor applications where line regeneration is not required.

Characteristics of the AC890SD include:

- Power output up to 1500 HP
- 208-500 VAC input supply
- Compatibility with all feedback and networking options
- Built-in dynamic brake switch with provision to add external braking resistor
- 24VDC control board supply for programming without power
- Torque and speed signal outputs
- USB programming port
- Operator keypad/display for programming, status, and diagnostics

Reduced dimensions, compact footprint

The AC890 has been designed to be compact and require the minimum possible cabinet space. Boasting the latest innovations in semiconductor cooling, the AC890 is a class leader in terms of its size.

Common Bus System (CS+CD)

Common Bus System

The AC890 is also available in a common bus platform, where multiple motor output drives (CD) are easily connected to a common DC bus supply (CS).

Characteristics of the common bus drive (AC890CD) :

- Power output to 150 HP in 5 frame sizes
- Power Supply : 320 to 705 VDC
- Compatibility with all feedback and networking options
- 24VDC control board supply for programming without power
- Torque and speed analog outputs
- USB programming port

Characteristics of the common bus supply module (AC890CS):

- Power output 25 to 135 HP
- Power Supply : 208-500 VAC
- Built-in dynamic braking unit (external braking resistor required)
- Operator display
- Up to 162A output per module

The control terminals are plug-in style, simplifying connection to the drive during installation and allowing a fast swap-out for maintenance purposes.

The Common DC bus also helps to keep the overall size of the system to a minimum. Simply open the bus terminal cover, connect the bus bars and close.

Removable terminal block connections for easier installation and maintenance

Fast connection of the common DC busbars

AC890 Systems Drive

Technical Specification

Power Supply	890CS : 208 - 500 VAC +/- 10 % 890CD : 320/560 - 705 VDC 890SD : 380 - 500 VAC +/- 10 % Frames E/F/G/H/J/K : 380 - 460 VAC +/- 10 %
Operating Temperature	0°-45°C (32°-113° F) - Frame B-F 0°-40°C (32°-104° F) - Frame G and above (derate by 2% per degree C up to 50°C maximum)
Altitude	Up to 1000m ASL (derate 1% per 100m to 2000m max)
Protection	IP20 (Frames G/H/J: IP00)
Humidity	Maximum 85% Non-Condensing
Analog Inputs	4; 12 bit, Configurable 2 x 0-10V, +/-10V, 0-20mA, 4-20mA and 2 x 0-10V, +/-10V (High resolution 15 bit plus sign analog input available with addition of 8903/AI option)
Analog Outputs	2; 12 bit, Configurable 0-10V, +/- 10V
Digital Inputs	7 ; Configurable 24VDC
Digital Output	2; Configurable 24VDC
Digital Relay Output	1; Configurable
Communications Options	EtherNet/IP, Modbus/TCP, CANopen, PROFIBUS, PROFINET, DeviceNet, ControlNet, FireWire, EtherCAT, Peer to peer, RS485/Modbus
Axis Synchronisation	Internally via Firewire IEEE1394
Overload	Constant Torque Ratings: 150% for 60 sec Variable Torque Ratings: 110% for 60 sec Servo Mode: 200% for 4 sec
Output Frequency	0-590 Hz - Volts/Hertz Mode 0-350 Hz - Closed Loop Vector Mode 0-120 Hz - Sensorless Vector Mode
Switching Frequency	Size B-D - 3 kHz (4 kHz or 8 kHz in servo mode) Size E - 3 kHz or 6 kHz Size F - 3 kHz Size G-H - 2.5 kHz Size J - 2 kHz Some exceptions may apply - see manual
Atmosphere	Non flammable, non corrosive and dust free

Safe Torque Off - STO

The AC890 features Safe Torque Off functionality as **standard**, offering users protection against unexpected motor start-up in accordance with EN18849-1 PL-e or SIL3. STO connections are made to X11 terminals per installation manual.

To ensure a high degree of safety, two independent STO control channels are implemented in hardware. The circuit is designed such that a fault in one control channel will not affect the other channel's ability to prevent the drive from starting, i.e. the STO function of the is tolerant to any single fault. It may not be tolerant to an accumulation of faults. This is in keeping with its declared safety ratings.

STO always overrides any attempt to start the drive. If one or both STO control inputs is requesting the STO function, the drive will not start, even if for example, the drive's software malfunctions and tries to cause the motor to turn. The STO function is implemented in hardware; it overrides all software activities. The only software involvement is to report STO status to the user via an MMI, serial communications link or user terminal on the AC890 control board as defined by the drive configuration.

Note: STO is an electronic inhibit intended for use during normal operation of the machine. It is not intended for use during machine maintenance, repair, replacement or other similar activities. For these activities recognized electrical power isolation devices and lock-out procedures must be used.

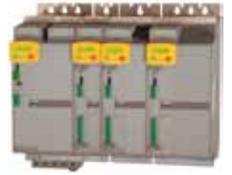

Conformal Coating

For environments that have dusty, humid or corrosive atmospheres, the AC890 can optionally be supplied with conformally coated circuit boards that improve the drives resistance to corrosion, thereby increasing reliability and service life. Environments that would typically benefit from conformal coating could include:

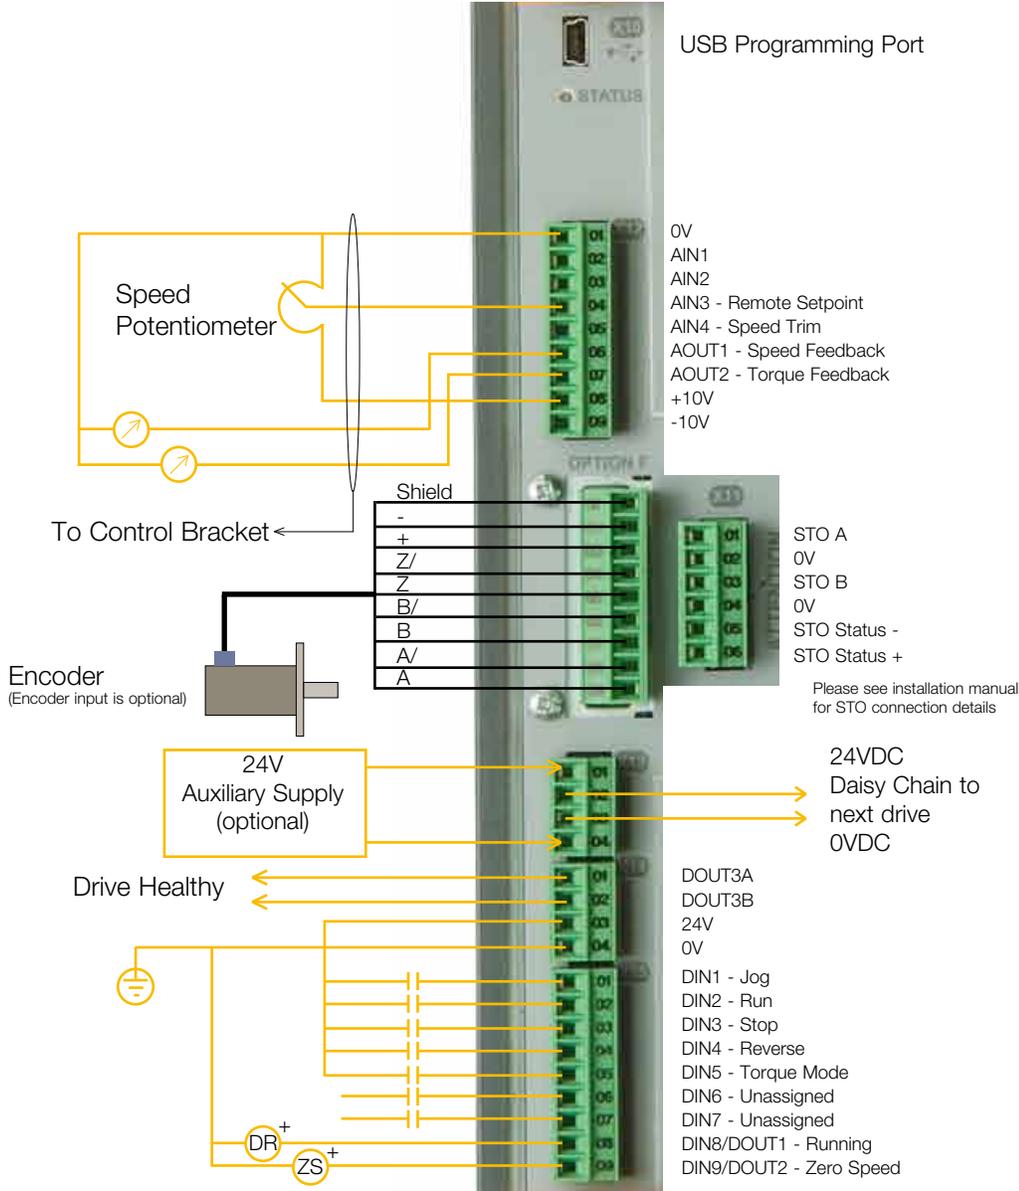

- Water and wastewater treatment plants
- Paper and pulp processing mills
- Steel mills
- Marine and offshore
- Outdoor cranes
- Wind, solar, and wave power generation (Grid tie configuration)
- Food and chemical processing plants

Modular Systems Drives

AC890 Systems Drive

Connection Diagram

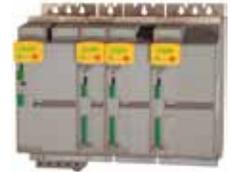

This diagram shows examples of some basic user connections to the Control Module. It is not intended to be a substitute for the installation manual which is provided with each drive and available for download on the website.

Modular Systems Drives

AC890 Systems Drive

Active Front End

4 Quadrant active front-end power supply with regeneration to the grid

By specifying an AFE supply, AC890 common bus systems can be configured to feed energy back into the grid supply with sinusoidal currents and unity power factor; with very low levels of harmonic current distortion. Use the AFE with AC890CD modules for a complete system.

Required Parts (Provided with AFE package)

Pre-charge circuit

LCL Filter

FULLY BIDIRECTIONAL POWER FLOW

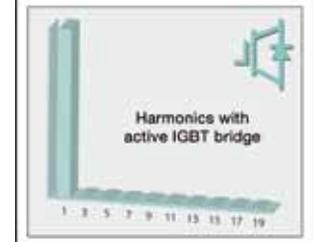

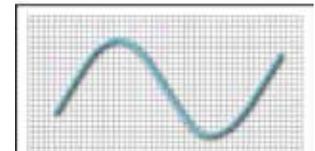

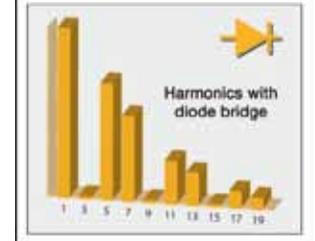

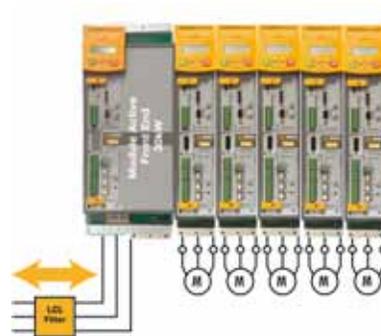

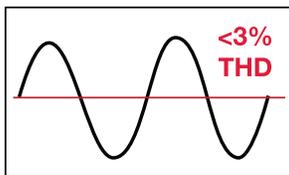

150% OVERLOAD FOR 60 SEC

SINUSOIDAL INPUT CURRENT

HARMONIC LEVELS MEET REQUIREMENTS OF IEEE 519

Note :

It is possible to use a larger separate active front-end module for higher power AC890 systems. In this case, several AC890's can be connected to the AFE using the AC890CA common bus adapter.

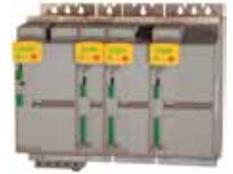

AFE Part Number	Sub-panel Part Number	Power (HP)	Current (A)	Notes

DC Power Supply Module

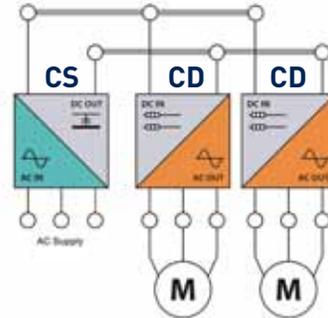

AC890CS Module

10 HP - 135 HP (40A - 200A)

Description

Used in common bus systems, the AC890CS (Common Supply) module is able to provide DC bus voltage to one or more AC890CD units. Inter-connecting busbar is available from Parker. This modularity provides significant space saving in the enclosure. For 12 pulse or 18 pulse input, multiple CS modules may be used. (See page 55 for details on alternate input power configurations.)

DC Power Supply

Use with AC890CD for a common bus system

208-500VAC Input

Built-in dynamic braking unit

DC bus power output terminals

Operator display for diagnostics

CS Module Includes:

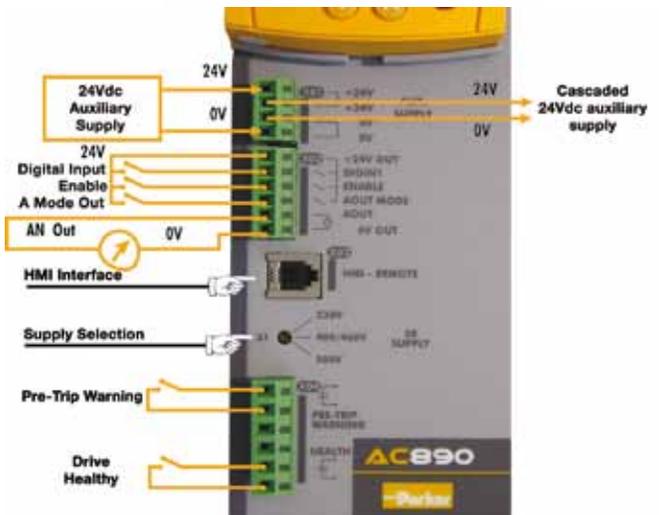

“Drive Healthy” contact

24VDC auxiliary supply (optional)

HMI Interface

Power supply selector

Configurable analog outputs

Electrical Characteristics - AC890CS Drives

Part Number	Frame	Input voltage (VAC)	Power (HP)	Power (kW)	AC input current (A)	DC output current (A)
890CS/5/0032B/B/00/N/EN	B	230	10	7.5	32	40
		400/460	25	15

890CS/5/0162D/B/00/N/EN	D	230	60	45	162	200
		400/460	135	90		

kW power ratings correspond to 400 VAC input

Note: For increased power, additional units can be connected in parallel.

For further details, contact our technical support department

Modular AC Systems Drives

AC890CD Series Systems Drive

1 HP - 150 HP (1.5A - 180A)

Description

Used in common bus systems, the AC890CD (Common Drive) module accepts DC input from an AC890CS unit. Multiple CD units may be connected to a single CS. Interconnecting busbar is available from Parker. This modularity provides significant space saving in the enclosure. Typical applications include printing, converting, or other continuous web processes.

DC Input

Power Supply 320, 650, 705VDC

Use with AC890CS for a common bus system

Operator display supplied as standard

Common options as AC890SD (See page 66)

* 890CD/4/0156F/... and 890CD/4/0180F/... are not UL or cUL listed.

Notes: The AC890 can be provided as Advanced Performance (Per table above) or High Performance by changing "A" in part number to "H".

For higher powers, refer to AC890SD series supplied from a DC bus. Servo current ratings assume 4kHz switching frequency.

Servo overload ratings: Frame B-D - 200% for 4 sec., Frame E-F - 150% for 60 sec.

Modular AC Systems Drives

AC890SD Series Systems Drive

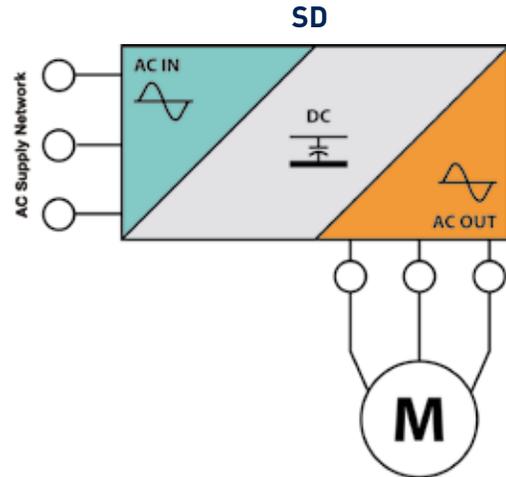

0.75 HP - 1500 HP

Description

The AC890SD (Standalone) drives are independent modules with integrated three-phase AC supply inputs. With its wide range of sizes available, the AC890SD is suitable for every type of application from a small machine to a large industrial high power process line. For variable torque loads like fans, blowers, and most pumps, economical “VT” ratings are offered for Frame E and larger.

- AC Input or DC common bus**
- Built-in dynamic braking module**
- Operator display provided as standard**
- Common options as AC890CD (See page 66)**

Electrical Characteristics - AC890SD Drive - 230V

Part Number	Frame	Input Voltage (VAC)	Power CT or VT (HP/kW)	CT or VT Output Current (A)	Servo Output Current (A)

Kilowatt ratings correspond to 400 VAC input.

Specify VT or CT when ordering K frame units.

*12-Pulse Input Optional

**18-Pulse Input Optional

Permitted overload : 150% for 60 sec in vector mode

Servo current ratings assume 4kHz switching frequency.

Servo overload ratings: Frame B-D - 200% for 4 sec., Frame E-F - 150% for 60 sec.

Modular AC Systems Drives

AC890 Alternative Input Power Configurations

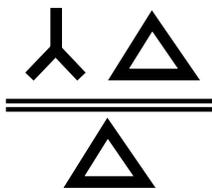

0.75 HP - 1500 HP

The modular design of the AC890 makes it easy to connect parallel input (CS) modules for multi-phase configurations. By using 12-pulse or 18-pulse configurations, harmful line harmonics can be greatly reduced. Or, for the ultimate in harmonic abatement, an Active Front End (AFE) may be selected. (See page 50 for details on AFE units.)

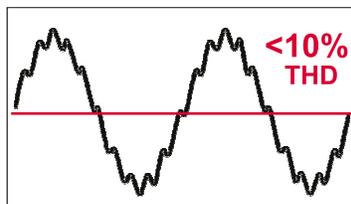

The typical AC drive has six rectifiers in a three phase bridge configuration, and is commonly referred to as a "6-pulse" configuration. A 12-pulse drive configuration contains two sets of six rectifiers, an 18-pulse configuration, three sets of six rectifiers and so on. If the AC power connected to each set of rectifiers is "phase shifted", then some of the harmonics produced by one set of rectifiers will be opposite in polarity from the harmonics produced by the other set of rectifiers. The two (or three) wave forms effectively cancel each other out. To provide the phase shifted AC power, a special transformer with multiple secondary windings is specified.

AC890

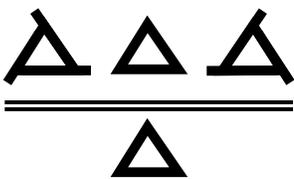

12 Pulse Transformer Configuration

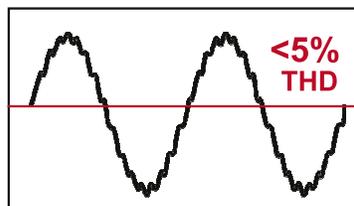

Input Current Waveform

12 pulse connection (option)	CS Modules Required	2
	Harmonics	Under 10% THD
	Input Transformer	User supplied - Delta primary, Wye and Delta secondaries, 30 degree phase shift.

18 Pulse Transformer Configuration

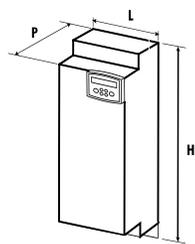

Input Current Waveform

18 pulse connection (option)	CS Modules Required	3
	Harmonics	Under 5% THD
	Input Transformer	User supplied - Delta primary, three secondaries, 20 degree phase shift.

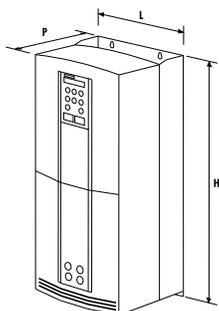

For installations that require ultra low harmonics, with THD under 3%, consider an Active Front End (AFE) as described on page 50.

Application Profile

Process Optimization - Shaftless Printing

Shaftless printing machine control delivers improved performance and quality thanks to AC890

Summary

Parker SSD Drives AC890 Modular Systems Drives were selected when a large end-user print company wanted to upgrade their existing printing line. The integrated shaftless printing function blocks made it a simple task to replace the mechanically linked line shafts with individual AC890 drives capable of precise synchronization and print registration adjustment to each section

The inclusion of high performance brushless motors increased acceleration and deceleration rates allowing greater production throughput and the electronic control of the process simplified and reduced changeover times considerably.

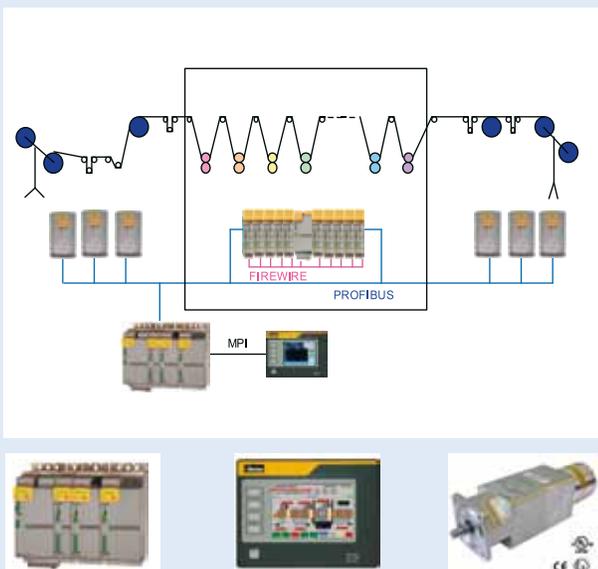

TS8000 HMI's completed the transformation with an integrated web-server and Ethernet connectivity, delivering real-time control and data capture and providing seamless integration to other manufacturing systems.

Benefits

- **Removal of mechanical line shafts reducing maintenance and complexity**
- **Improve acceleration and deceleration speeds**
- **Improved changeover speeds**
- **Reduced waste on changeover**
- **Integrated diagnostics and data handling**
- **Web server delivering real-time production and maintenance information**
- **Registration mark detection and synchronization INSIDE the drive**

AC890

Parker SSD Drives Solution

AC890 Modular Systems Drive

- Compact footprint thanks to Common DC Bus configuration
- Common DC Bus allows regenerated power to be shared between machine sections
- AC890 capable of driving a wide range of AC motors with a variety of feedback devices

Total Solutions

- ATEX motors for explosive atmospheres
- Web enabled TS8000 HMI's between 3" and 15" to suit all visualization requirements

High Power Modular AC Drives

AC890PX Series

150 - 600 HP/110 - 400kW

Description

The AC890PX is a high power standalone modular enclosed drive designed for industrial applications. It is especially suited to retrofit applications where a complete standard enclosed drive system is required. It is particularly suited to the following applications:

- Energy-saving pump and fan applications
- Extruders
- Hoists and Cranes
- Mixers and Centrifuges
- Engine Dynamometers

Models Available:
400 VAC
460 VAC
575 VAC
690 VAC

Features

Suitable for use with all types of AC motor

The AC890PX can control all types of AC motor:

- Induction motors
- PMAC servo motors
- Torque Motors

Operation with or without feedback

The drive can be configured for the following operating modes:

- Volts/Hertz speed control
- Sensorless Vector speed control
- Full Flux Vector speed control
- PMAC Servo motor speed/position control

Compatible with a wide range of feedback options

Thanks to a range of optional feedback cards, the AC890PX works with all types of popular feedback systems:

- Incremental encoder
- Resolver
- SinCos (Endat 2.1) encoder
- Absolute encoder EnDat

Conforming to international standards

Suitable for supply voltages of 380VAC to 690VAC, the AC890PX can be connected to different supply networks around the world without any additional equipment. Meeting the requirements of key international standards, the AC890PX is supported around the world through the Parker SSD Drives support network.

High Power Modular AC Drive

AC890PX Series

150 - 600 HP/110 - 400kW

Features

Ultra-Compact Drive

The extremely compact footprint of the AC890PX is unmatched in the high power AC drives market. Within its small frame it integrates all of the standard equipment necessary for your installation: line reactor, disconnect switch, fuses and second environment line filter (compliant to EN 61800-3), and more. Configuration and start-up of the drive can be performed using the operator keypad in a matter of minutes or from your laptop using the DSELite configuration software.

- **STANDARD 3% Line Reactor**
- **STANDARD AC Disconnect**
- **STANDARD Line Fuses**
- **STANDARD Dynamic Braking**

Low-maintenance ensures maximum machine up-time and productivity

Thanks to a plug in design, the individual “PowerPak” phase modules of the AC890PX can be replaced in just minutes by any technician, even a non-specialist. These lightweight, ship anywhere modules help to reduce machine downtime and lost productivity in the event of a fault occurring. And each phase module has its own on-board diagnostics to make troubleshooting a snap.

PowerPak Phase Module – Front View

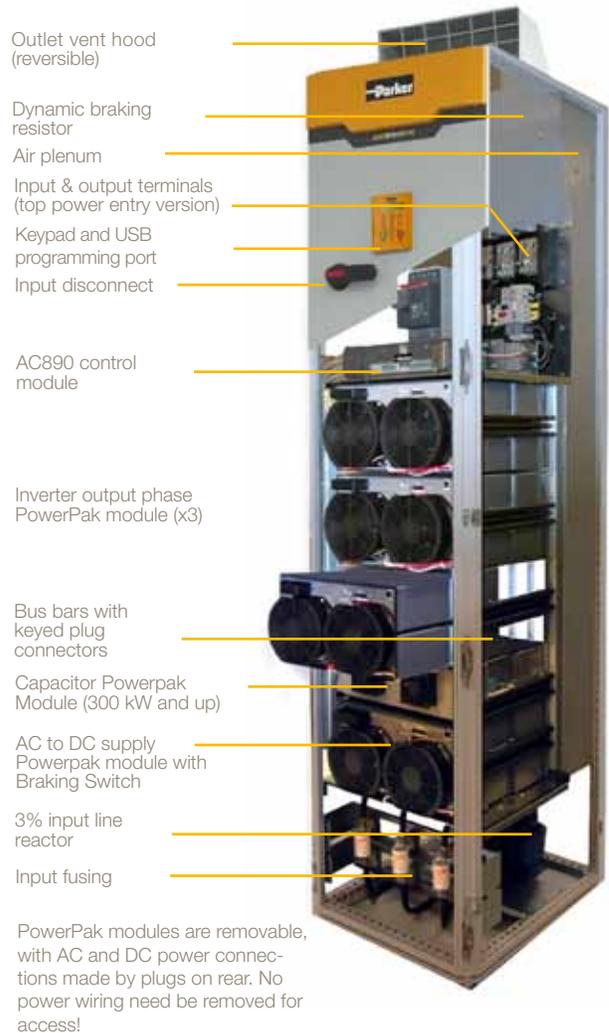

PowerPak Phase Module - Rear View

Total flexibility for easy factory integration

To facilitate maximum integration into the factory or existing buildings the AC890PX is available in a number of different variants :

- Top or bottom cable entry/exit to suit existing wiring arrangements
- 12 or 18 pulse configuration
- Active Front-End with negligible harmonic distortion
- Integrated contactors, fuses, chokes etc.

Note : Certain variants require an additional enclosure bay.

Top Cable entry/exit

Bottom Cable entry/exit

High Power Modular AC Drive

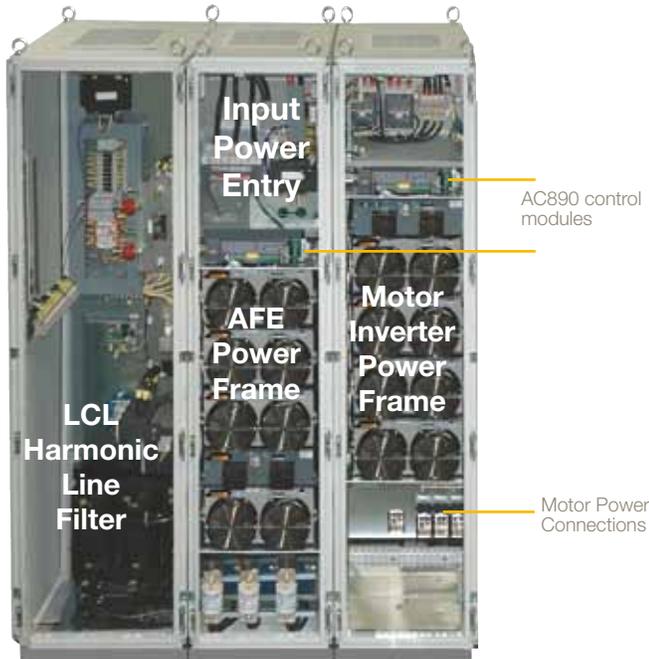

AC890PX Series

150 - 600 HP/110 - 400kW

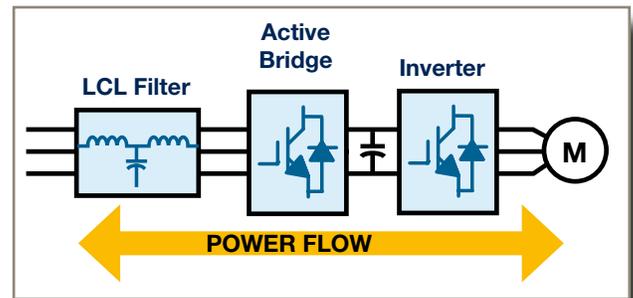

Alternative Input Power Configurations

Active Front-End (AFE) Version - Energy regeneration with low harmonic distortion

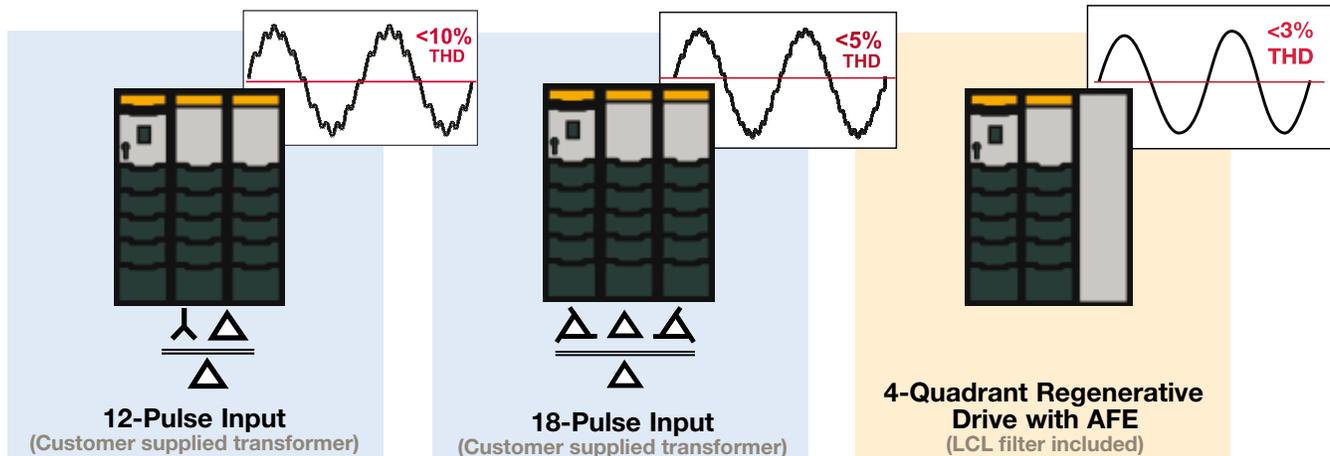

- Fully line regenerative drive
- Continuous duty at full torque - motoring or braking
- Negligible power line harmonics - meets IEEE519
- Unity power factor
- Compact 3 bay (1600 mm) enclosure
- Grid Tie models also available

The modular design of the AC890PX makes it easy to configure parallel input modules and multi-phase configurations. By using 12-pulse or 18-pulse configurations, harmful line harmonics can be greatly reduced. Or, for the ultimate in harmonic abatement, an Active Front End (AFE) may be selected. The typical AC drive has six rectifiers in a three phase bridge configuration, and is commonly referred to as a "6-pulse" configuration. A 12-pulse drive contains two sets of six rectifiers, an 18-pulse drive, three sets of six rectifiers and so on. If the AC power connected to each set of rectifiers is "phase shifted", then some of the harmonics produced by one set of rectifiers will be opposite in polarity from the harmonics produced by the other set of rectifiers. The two (or three) wave forms effectively cancel each other out. To provide the phase shifted AC power, a transformer with multiple secondary windings is used.

Alternative Input Supplies

High Power Modular AC Drive

AC890PX Series

150 - 600 HP/110 - 400kW

Technical Specification

Nominal Supply Voltage	VT (Standard duty)	CT (Heavy duty)
400 VAC 3ph +/-10%	132-400kW	110-315kW
460 VAC 3ph +/-10%	200-600HP	150-500HP
575 VAC 3ph +/-10%	200-500HP	150-400HP
690 VAC 3ph +/-10%	132-400kW	110-315kW
Overload Capacity		
Induction motor - standard duty (Variable Tq)	110% for 60 sec	
Induction motor - heavy duty (Constant Tq)	150% for 60 sec	
PMAC motor - heavy duty (Constant Tq)	150% for 60 sec	
Output Frequency	0 - 590 Hz in V/F mode 0 - 350 Hz in Closed loop vector mode 0 - 120 Hz in Sensorless vector mode	
Switching Frequency	2 kHz (standard) - Adjustable 4 kHz (derating required, consult factory). Suppression of audible frequencies	
Dynamic Braking	Dynamic braking module integrated as standard (limited service db resistor included). External braking resistor optional.	
Operating Temperature	0°C to 40°C, derate 1% per degree over 40°C to maximum of 50°C	
Altitude	Up to 1000m ASL (derate 1% per 100m to 4600m max)	
IP Rating	IP 21/UL (c-UL) Enclosed Type 1 as standard. Higher ratings are available - consult factory for quotation	
Dimensions	86.7" (2203mm) H x 19.9" (505mm) W x 25.6" (650mm) D (Height includes 8" (203mm) vent hood)	
Enclosure Rating (Radiated emissions)	EMC Enclosure Standard	Attenuation to RF in spectrum 30-1000MHz
	EN61800-3 Category C3	NONE
	EN61800-3 Category C2 Restricted Distribution EN61000-6-3	10db
	EN61800-3 Category C1 Unrestricted Distribution EN61000-6-4	20db
Safety rating	STO - Category 3 to ISO13849-1 PLe, SIL3	
Humidity	85% maximum humidity at 40°C, non-condensing	
Atmosphere	Non flammable, non corrosive, dust free	
Climate	Class 3k3, as defined by EN50178 (1998)	
Vibrations	Test Fc meeting EN60068-2-6. 10Hz<=f<=57Hz sinusoidal 0.075mm amplitude, 57Hz<=f<=150Hz sinusoidal 1g, 10 sweep cycles per axis on each of three mutually perpendicular axis	
Pollution Index	Degree II (non-conductive pollution, except for temporary condensation)	
Europe	Low Voltage Directive 73/23/EEC with amendment 93/68/EEC, Article 13 and Annex III, EN50178 (1998) Conforms to EN61800-3 (second environment)	
North America / Canada	Product conforms to UL specifications.	

Safe Torque Off - STO

The AC890PX features Safe Torque Off functionality as standard, offering users protection against unexpected motor start-up in accordance with EN18849-1 PL-e or SIL3. Two independent STO control channels are implemented in hardware. A fault in one control channel will not affect the other channel's ability to prevent the drive from starting, i.e. the STO function of the is tolerant to any single fault. It may not be tolerant to an accumulation of faults. This is in keeping with its declared safety ratings. If one or both STO control inputs is requesting the STO function, the drive will not start, even if for example, the drive's software malfunctions and tries to cause the motor to turn. The STO function is implemented in hardware; it overrides all software activities. The only software involvement is to report STO status to the user via an MMI, serial communications link or user terminal on the AC890 control board as defined by the drive configuration.

Note: STO is an electronic inhibit intended for use during normal operation of the machine. It is not intended for use during machine maintenance, repair, replacement or other similar activities. For these activities recognized electrical power isolation devices and lock-out procedures must be used.

High Power Modular AC Drive

AC890PXP Series

Solutions above 600 HP

Description

The flexible nature of the AC890PX means that higher power ratings of up to 1800HP (1200kW) can be provided as well as the standard catalog ratings. These larger AC890PXP units use the same modular construction as the standard AC890PX, with replaceable phase modules, built into multiple bay cabinets.

Power ratings of over 1000HP (750kW) can be supplied with

Parker's 2-phase advanced cooling system, which uses a non-conductive liquid refrigerant. This enables Parker to offer high power inverters with one of the highest power densities available in the market, and its customers to benefit from smaller form factors and increased floor space.

The high power AC890PXP is also available as a DC input inverter, AC input converter, grid-tie

inverter and fully line regenerative four-quadrant drive. With this flexibility and line voltage ratings up to 690 VAC, the AC890PXP covers applications including industrial motor control, solar and wind power, and utility scale energy storage.

Please contact the factory to obtain pricing on an AC890PXP to meet your specifications.

AC890

Accessories and Options

AC890/AC890PX Series

Table of Contents

Category	Page
Operator Interface	
While every AC890 and AC890PX series drive is shipped with a keypad/display, there are several options available such as a remote keypad kit and a full featured graphical display. In addition, the TS8000 series HMI is fully compatible with the AC890 and AC890PX series.	67
Accessories - Common Bus	
The AC890 series is a natural for common bus applications. Frames B-D can be mounted side by side, and include convenient accessible clamp terminals for bus connections, as well as bus adapters to connect additional rows of drives. For convenience, we offer quality bus bar stock and related accessories so that everything is guaranteed to fit.	67
Options Cards - Communication	
A wide variety of communications cards allow the AC890 and AC890PX series drives to interface with most current and legacy SCADA networks, using both open architecture and proprietary standards. Other cards allow multiple drives to communicate with each other, peer to peer. Field or factory installed.	68
Options Cards - Feedback	
Since the AC890 family is compatible with such a wide variety of motor types, a number of feedback option cards are offered. Choose from a number of encoder and resolver options to match the feedback device on your motor or process line. Field or factory installed.	70
Option Cards - I/O	
Even though the AC890 family comes standard with extensive I/O, certain applications have special requirements. For these, we offer option cards that will accept "master encoder" inputs, registration mark signals, and high resolution analog references. Field or factory installed.	71
Accessories - Mounting and Wiring	
The unique design of the AC890 frame B-D accommodates ductwork and forced air ventilation, and we offer the hardware required in the form of duct and fan kits. For ease of wiring, several pre-manufactured cables are offered.	74
Accessories - Dynamic Braking	
All AC890 drives include braking logic and transistor, but since not every application requires dynamic braking, the resistor assemblies are optional. Braking kits include overload	75
Accessories - Software Tools	
For drive configuration and programming	106
Accessories - Power Quality	
Preselected line/load reactors and EMC filters can be provided for the AC890 family.	112

Communication Interfaces

Ethernet/IP (8903/IP/00)	
Supported Protocols	Ethernet IP, Level 2 I/O Server CIP
Communication speed	10/100Mbps/s
Station Address	By DSE software via RTNX protocol
Connection support	4 class 1 (cyclic I/O data transfer), 16 class 3 (explicit messaging)
Interface	RJ45
Suitable for Drives	AC890/AC890PX version 3.2+
Modbus/TCP (8903/IM/00)	
Communication speed	10/100Mbps/s
Station Address	By DSE software via RTNX protocol
Connection support	Up to 4 simultaneous connections
Interface	RJ45
Suitable for Drives	AC890/AC890PX version 3.2+
EtherCAT (8903/CT/00)	
Supported Protocols	CANopen over EtherCAT (CoE)
Communication speed	100M bits/s
Features	DS301 compliant, EMCY support
Interface	RJ45 in/RJ45 out
Suitable for Drives	AC890/AC890PX version 3.7+
DeviceNet (8903/DN/00)	
Supported Protocols	Supports the group 2 only slave subset of the DeviceNet protocol
Supported Messages	Polled I/O, Cyclic Outputs, Change of State (COS), Explicit Messaging
Communication Speed	125K, 250K et 500K bits/s
Station Address (MACID)	DIP switch or software setting of station address and network speed
Interface	5-position removeable terminal strip
Suitable for Drives	AC890/AC890PX version 1.9+
ControlNet (8903/CN/00)	
Supported Messages	Polled I/O
Station Address	Selectable by DSE software or hardware switches
Data capacity	Up to 504 bytes of producer data and 504 bytes of consumer data
Interface	2 Co-axial RG-6 connectors (channel A, B), RJ45 network access port
Suitable for Drives	AC890/AC890PX version 1.4+
Profinet/IO (8903/PN/00)	
Supported Protocols	Profinet I/O Real-time (RT) Protocol
Communication speed	100Mbps/s
Station Address (IP)	Software setting of IP address via DSE
Interface	RJ45
Suitable for Drives	AC890/AC890PX version 3.3+

Options

AC890/890PX Series

Communication Interfaces

Peer to Peer (8903/SP/00)

Supported Protocols	Peer to peer data exchange with other AC890/AC890PX drives
Communications Speed	Up to 1Mbits/s selectable by DIP switch
Station Address	DIP switch
Interface	5-position removable terminal strip
Suitable for Drives	AC890/AC890PX version 3.3+

FireWire IEEE 1394 (8903/FA/00)

Communication Supported	Peer-to-Peer communication between drives via IEEE1394 standard
Communication Speed	Up to 400 MBaud
LA471480	Firewire Repeater Kit - includes 100 ft. CAT5 cable
Interface	3 IEEE1394a Firewire ports, removable terminal strip for 24V power input
Suitable for Drives	All AC890/AC890PX

RS485/Modbus (8903/RS/00)

Supported Protocols	Slave Modbus RTU
Communication Speed	1200 to 115200 bits/second
Interface	RS485 2 wire
Station Address	Selectable via software
Suitable for Drives	AC890/AC890PX version 3.7+

CANopen (8903/CB/00)

Profile	DS402
Supported Messages	SDO, PDO, NMT, SYNC
Communication Speed	20K, 50K, 125K, 250K, 500K, 1Mbits/s selectable by software or DIP switch setting
Station Address	DIP switch or software setting of station address
Interface	5-position removable terminal strip
Suitable for Drives	AC890/AC890PX version 1.3+

Profibus-DP (8903/PB/00)

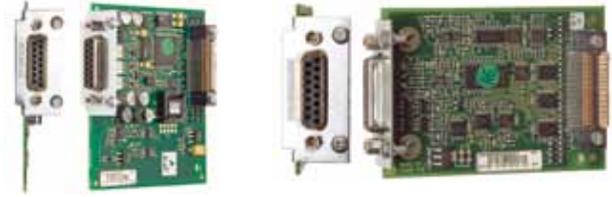

Supported Protocols	Profibus-DP ; Demand Data and Data Exchange
Communication Speed	Up to 12M bits/s selected by the master
Station Address	DIP switch or software setting of station address
Interface	9-pin D-sub connector
Suitable for Drives	AC890/AC890PX version 1.4+

Note: Part numbers above refer to option cards provided loose. To order an option card factory installed in a drive, change the last two digits from "00" to "FF".

Options

AC890/890PX Series

Feedback cards

8902/RE/00 - Resolver

The 8902/RE resolver speed feedback option allows the resolver to be connected directly to the drive to provide highly accurate speed feedback measurement. Contains a carrier output signal to power the resolver.

Part Number	Description
8902/RE/00/00	Optional Resolver feedback card
8902/RE/00/FF	Optional Resolver feedback factory-installed

Features

Maximum Speed	Up to 50,000 RPM (with 2 pole resolver)
Carrier Output Signal	7V rms, 8kHz
Maximum Carrier Supply	70mA rms
Maximum Input Voltage	±12V peak
Accuracy	< 5 minutes
Resolution	Equivalent to 16 bits in one revolution of resolver
Inputs	Differential inputs Zin ~2 kΩ
Maximum Input Voltage	12V peak

8902/M1/00 - Sin/Cos Encoder

The Sin/Cos Registration Option allow 1Volt peak-to-peak Sin/Cos encoders to be connected directly to the motor controller to provide highly accurate speed feedback measurement and registration. It may be used in conjunction with 8903/M1 for systems requiring two simultaneous encoder inputs. See page 72 for more information.

Part Number	Description
8902/M1/00/00	Optional encoder feedback card
8902/M1/00/FF	Optional encoder f/b card factory-installed

Features

Maximum Pulse Rate	250kHz
Receiver Impedance	120Ω
Input Format	2 differential 1V p-p signals in quadrature
Encoder Supply	250mA maximum load
Supply Voltage	5V/10V adjustable
Terminal Type	15 pin D-Sub connector
Maximum Cable Length	150m shielded cable
Serial Protocol	Endat 2.1

8902/EQ/00 - HTTL Encoder

The HTTL 8902/EQ speed feedback option allows incremental encoders to be connected directly to the drive to provide highly accurate speed feedback measurement. Supplies variable voltage isolated encoder power supply.

Part Number	Description
8902/EQ/00/00	Optional HTTL incremental encoder
8902/EQ/00/FF	Option HTTL encoder factory-installed

Features

Maximum pulse rate	250kHz (differential) 200kHz (single ended)
Receiver current	≤10mA per channel
Input Format	Two differential channels in quadrature (Clock/direction or clock only)
Input Voltage	±30V (differential), 0-30V (single-ended)
Input Voltage Differential	±30V maximum
Input Voltage Threshold	3V ± 1V (differential) 8V ± 1V (single-ended)
Encoder Power Supply	Maximum load 200mA or 2W Voltage adjustable 10V to 20V by firmware

Options

AC890/890PX Series

I/O Cards

8903/EP/00 - Encoder Input

The 8903/EP encoder input option allows an incremental encoder input as a reference, and provides a synthesized encoder output. The input features optically isolated differential inputs for channels A, B and Z. All inputs are compatible with RS422 and RS485 encoders, as well as encoders that provide output voltages as high as +/-30V. All decoding logic required to interface the encoder input to the drive is provided. Three non-isolated differential digital outputs are used for synthesizing an encoder output. Installed along with an 8902-EQ incremental encoder option, the board can be used to create an electronic line shaft between the reference and feedback encoders.

Part Number	Description
8903/EP/00/00	Optional Encoder Input card
8903/EP/00/FF	Optional Encoder Input factory-installed

8903/AI/00 - Hi-Res Analog Input

The 8903/AI card adds a high resolution analog input to the drive. In addition to all of the features and functionality of the 8903/EP encoder option board above, the 8903/AI includes a 15 bit plus sign +/-10V analog input. This makes the drive suitable for applications, where the drive follows a precision analog speed set point from a CNC and send back to the CNC the position of the controlled axis. It provides the fast response times required for accurate position control.

Part Number	Description
8903/AI/00/00	Optional High Resolution Analog Input and Encoder Input card
8903/AI/00/FF	Optional High Resolution Analog Input and Encoder Input factory-installed

Features

Encoder Input	8903/EP and 8903/AI
Maximum Pulse Rate	250kHz
Receiver Current	≤10mA per channel
Input Format	Two differential channels in quadrature, clock/dir or clock only
Input Voltage Range	±30V (differential) 0-30V (single-ended) or RS422/485
Input Voltage Threshold	< 2V (differential) 8V ± 1V (single-ended)
Synthesized Encoder Output	8903/EP and 8903/AI
Supply Voltage	30V
Operating Input Supply Voltage (VS)	5V to 24V Absolute Maximum
Maximum Output Frequency	250kHz on each output
Maximum Output Current	± 100mA per output
Output Voltage	Low logic level < 3V @ 100mA High logic level > VS – 4V @ 100mA
Overload and short circuit duration	Indefinite
Maximum cable length *	150 meters
Analog Input	8903/AI Only
Resolution	15 bits + sign
Input voltage range	+/- 10V
Input Format	Differential
Input Impedance	100k-ohm
Input low pass filter	3kHz

Plug-in Design for easy field installation of all feedback and I/O options, or order factory installation... your choice!

Options

AC890/890PX Series

Sin/Cos registration position

8903/M1/00, 8902/M1/00

Description

The 8903/M1/00 and 8902/M1/00 feedback cards allow operation without external registration position, thanks to the connection of the encoder to the drive. They provide highly accurate speed feedback measurement and registration. Nevertheless registration applications are best achieved when both cards are used.

- Registration achieved **in the drive** (“High Performance” AC890 model only)
- Interpolates each encoder line with 11-bit accuracy giving 4 million counts/rev. on a 2048 line encoder
- Optional 1V input from ‘Z’ index pulse for use with registration
- Supplies 5V or 10V to the encoder
- Decodes Heidenhain Endat 2.1 absolute position encoders
- 4 optically isolated auxiliary digital outputs that can be used either for general purpose inputs, or for inputs from registration mark sensor (8903/M1 only)
- 3 non-isolated auxiliary digital outputs that can be either for general purpose outputs or for synthesizing an encoder output (8903/M1 only)

Part Number	Description
8902/M1/00	Slave SinCos registration
8903/M1/00	Master SinCos registration
8902/M1/FF	Slave SinCos registration factory-installed
8903/M1/FF	Master SinCos registration factory-installed

Approved Encoders	1V p-p	Endat 2.1	Single Turn ABS	Multi-turn ABS

Specification

Encoder Inputs (8902/M1 and 8903/M1)

Maximum Pulse Rate	250kHz
Receiver Impedance	120Ω
Input Format	2 differential 1V p-p signals in quadrature
Encoder Supply	250mA maximum load
Supply Voltage	5V/10V adjustable
Terminal Type	15 pin D-Sub connector
Maximum Cable Length	150m screened cable
Serial Protocol	Endat 2.1

Auxiliary digital input (8903/M1 only)

Low Logic Level	0V to 5V relative to X63 pin 5
High Logic Level	15V to 26V relative to X63 pin 5
Absolute Max. Input Voltage	30V relative to X63 pin 5
Input Current	Low logic level < 1mA High logic level > 3mA, < 10mA Typical input at 24V : 7mA
Isolation withstand relative to drive chassis	30V
Input Safety Category	SELV
Terminal Type	6-way pluggable 3.5mm terminal block
Maximum Cable Length	150m screened cable is recommended for all lengths, but essential if over 30m in order to comply with EMC regulations

Auxiliary digital outputs (8903/M1 only)

Input Voltage (VS)	5V to 24V
Maximum Input Voltage	30V
Maximum Output Current	± 100mA per output
Output Voltage	Low logic level < 3V to 100mA High logic level > VS – 4V to 100mA
Overload and short circuit duration	Indefinite withstand
Max. Output Frequency	250kHz per output
Terminal Type	8-way pluggable 3.5mm terminal block
Maximum Cable Length	150m screened cable is recommended for all lengths, but essential if over 30m in order to comply with EMC regulations

AC890/AC890PX Series

Mounting and Wiring

Building your own system enclosure? Let Parker SSD provide the necessary pre-engineered hardware to save you time and expense. Our installation kits and components come with guaranteed compatibility with the AC890 drives. All from a single source: Parker SSD Drives.

Ventilation Components

AC890 air ducting components make easy work of cabinet building when force ventilation is to be used. The exhaust duct, supplied in 1 meter sections, is mounted to the top of the AC890 heatsinks and includes a 190 CFM fan. This arrangement provides a very effective means of cooling by drawing air directly through the drives' heat sinks and out of the air outlets which can be flex-ducted out of the cabinet. See part numbers in table to right.

LA471585 I/O Terminal Interface

The I/O Terminal Interface Module saves time and provides for a clean panel layout when used with the SSD AC890 series drive. The module is mounted on DIN rail and connected to the X12, X13, X14, and X15 I/O connectors on the AC890. With this module, 15 I/O points are accessible through push-type terminals, eliminating the need for a screwdriver and any concerns about loose wiring. For multi-drive systems, the interface modules can be mounted side by side, and with the included keyed jumper, will share Coast Stop and Program Stop commands from the lead drive, as well as the 24VDC auxiliary supply. If modules are not to be mounted directly adjacent, there is an optional 2 meter bus jumper cable available.

Parker SSD Drives also offers pre-made cables in three lengths for easy connection to the AC890 drive. See part numbers in table below.

Application Profile

Energy Savings - Pump applications

Pumping station retrofit reduces energy costs by replacing eddy current clutch

Summary

The wastewater treatment plant in Rock Hill, South Carolina turned to Parker SSD Drives when it needed to reduce energy and replace an obsolete eddy current clutch system on three 200 HP waste water lift pumps. By connecting the motors directly to the pumps, engineers were able to remove the obsolete and troublesome clutch systems which had been controlling the flow of waste water.

AC890PX High Power Modular Systems Drives were installed in bottom entry configuration to provide stand-alone control of the pumps. The integrated line reactors also removed the need for expensive additional harmonic filters to be installed.

In addition to providing significant energy savings, the AC890PX installation has also reduced the overall maintenance costs of the system by reducing the mechanical stresses of the pumps during starting.

Benefits

- **Significant reduction in energy consumption**
- **Efficient speed control of pump drive motors**
- **Reduced wear and tear of mechanical components**
- **Reduced maintenance and increased system availability**
- **Integrated 3% line reactor removing the need for additional filtering**

Parker SSD Drives Solution

AC890PX High Power Modular Drive

- High power ratings, can be configured for systems requiring 1MW and above
- Plug-in power modules for easy replacement
- Top or bottom cable entry provides flexibility in siting
- Available in 12 pulse, 18 pulse and AFE configurations
- Available in 400 VAC, 460 VAC, 575 VAC, and 690 VAC models

Worldwide Support

- Air-freightable plug-in power modules for improved availability and support
- Configurable to meet local requirements

Variable Speed DC Drives

Range Overview 1 HP - 2000 HP

www.parker.com/ssdusa/dc

Global DC Drive Solutions to Maximize Flexibility and Increase performance

With more than 30 years of worldwide application experience, Parker assists its customers in improving productivity and reducing energy consumption with a comprehensive, robust range of DC drives and drive systems. Parker DC drive products are sold, supported and serviced worldwide, with solutions from simple speed control to complex multi-motor coordinated process control. Parker DC drive products are easy to configure and commission, with simple but flexible function block-based configuration tools and connectivity with all major industrial fieldbus networks.

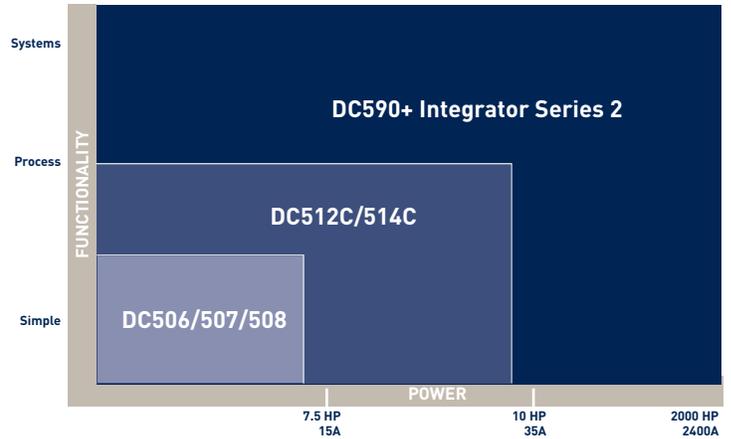

Digital DC Drives Maximize Flexibility and Functionality

Using the same 32-bit control architecture as our current range of AC drive products, Parker's range of digital DC drives provides the same high level of functionality - and with it flexibility and performance - as comparable AC drive systems, while simultaneously allowing the user to integrate both AC and DC drive systems in a single machine with the same interface and software.

Retrofit Existing Applications with the Latest Technology

By retrofitting existing DC motor applications with Parker digital DC drives, the user can avoid the cost of replacing an existing functioning, DC motor with a similar AC drive system, while still enjoying the benefits of a flexible control platform and high performance drive.

DC Drives Product Range Overview

DRV Package - "Ready to Install" DC Drives

Save design time, panel space and the time and cost of component sourcing and installation with Parker's unique DRV drive format. DRV drives include all peripheral power components typically required in a DC drive system, integrated in a self-contained package. This package contains the additional components within the footprint of the standard drive module and saves significant panel space while reducing complexity and improving the appearance.

DC590+ Integrator Series 2 Digital DC Drive

The DC590+ uses an advanced control platform to provide high levels of flexibility and performance for a wide range of applications. Designed for machine integrators, the DC590+ features function block programming, multiple communications and feedback options and support worldwide. Available as non-regenerative or full four quadrant regenerative. Available from 1-2400A maximum. Fieldbus options include Profibus-DP, CANopen, Modbus RTU, Ethernet and DeviceNet.

Typical applications include

- Converting machinery
- Hoists and cranes
- Plastics processing machinery
- Wire and cable manufacturing
- Automotive test stands

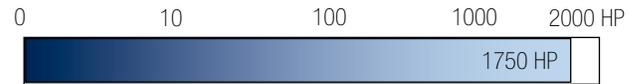

Variable Speed DC Drives

Range Overview 1 HP - 2000 HP

DC590+ DRV - "Ready to Install" Series 2

The DC590+ DRV Series version is a complete packaged drive solution, including AC line contactor, AC line fuses, DC fuse, control / field fuse and provisions for a motor blower starter. The DRV series reduces panel complexity while saving on panel space. Available to 1750 HP (2400A) maximum.

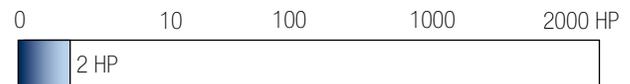

Analog DC Drives Range

Single Phase Analog Non-Isolated Converter: 506/507/508

Economical, compact torque and speed control of permanent magnet or shunt wound DC motors. Selectable between 110VAC or 230VAC single phase supply. Tachometer or armature voltage feedback, 3, 6, or 12A armature options.

Typical applications include:

- Conveyors, basic speed control
- Packaging machinery

Single Phase Two Quadrant Analog Isolated Converter: 512C

The 512C provides effective torque and speed control of permanent magnet or wound field DC motors. Extremely linear speed and current loops in an isolated package, ideal for single or multiple motor applications up to 32A (10 HP).

Typical applications include:

- Centrifugal fans and pumps
- Extruders and mixers
- Small paper converting machines

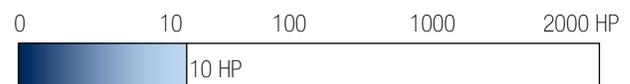

Single Phase Four Quadrant Analog Isolated Converter: 514C

The 514C offers full four quadrant regenerative control of permanent magnet or wound field DC motors. Ideal for applications requiring accurate or rapid deceleration of high inertia loads. Effective for single or multiple motor applications to 32A (10 HP).

Typical applications include:

- Machine tool spindles
- Wire drawing machines
- Winders/Reelers

DC Drives - Integrator Series

DC590+ Series 2

1 HP – 2000 HP

Description

The DC590+ Integrator Series 2 DC drive is the latest development of the range which also includes the AC690+ AC drives. It benefits from 30 years experience of designing and manufacturing drives for process line control with dedicated function blocks which simplify the implementation of applications such as sectional drive reels, winder control etc. The function block capabilities offer unparalleled

flexibility in both new installations and retrofit applications. A number of common fieldbus communications options enable connectivity to a wide range of popular control networks allowing the DC590+ to be integrated in larger control systems. The DC590+ is also available as a “ready to install” drive package called the DRV. This is a single integrated module that includes all associated power

components within the package. This innovative approach radically reduces design time, panel space, wiring time and cost. In addition the DRV minimizes the risk of error associated with installing the drive. The DRV concept is unique and comes from the experience gained from thousands of successful applications across a diverse range of industries.

Common programming, set-up and communications platform with AC690+ AC Integrator Series

Ratings up to 2000 HP (2400 Amps) and supply voltages to 690V

Internal controlled field supply

Function block programming, including open and closed-loop winder control as standard

DRV style includes built-in contactor, fuses and provision for on-board control transformer and blower starter

Standards

The DC590+ series meets the following standards when installed in accordance with the relevant product manual.

- CE marked to EN50178 (Safety, Low Voltage Directive)
- EN61800-3 (EMC Directive) with integral filters (External supply capacitors are required up to 110A for compliance.)
- Units in frames 1-4 are UL listed to standard UL508C and cUL listed to Canadian standard C22.2 #14

www.parker.com/ssdusa/dc590plus

DC Drives - Integrator Series

DC590+ Series 2

1 HP – 2000 HP

Next Generation Technology

Building upon the highly successful DC590+ drive used in thousands of applications world-wide, the DC590+ Integrator Series 2 drive takes DC motor control to the next level. With its state-of-the-art advanced 32-bit control architecture, the DC590+ drive delivers highly functional and flexible control suited to a whole host of industrial applications.

Typical Applications

- **Converting machinery**
- **Plastics and rubber processing machinery**
- **Wire and cable**
- **Material handling systems**
- **Automotive**

Function Block Programming

Function Block Programming is a tremendously flexible control structure that allows an almost infinite combination of user functions to be realized with ease. Each control function (an input, output, process PID for example) is represented as a software block that can be freely interconnected to all other blocks to provide any desired action.

The drive is shipped with the function blocks pre-configured as a standard DC drive so you can operate it straight from the box without further adjustments. Alternatively you can create your own control strategy with DSELite software, often eliminating the need for an external PLC and its associated complexity and cost.

Feedback Options

The DC590+ has a range of options which are compatible with the most common feedback devices enabling simple motor control through to the most sophisticated multi-motor system. Armature voltage feedback is standard without the need for any interface option.

- **Analog tach generator - AC or DC**
- **Encoder - 5, 12, 15, or 24V**
- **Optical fiber microtach encoder**

Interface Options

Designed with connectivity in mind, the DC590+ has a number of communications and I/O options that allow the drive to take control of the application, or be integrated into a larger system. When combined with function programming, custom functions and control can be easily created offering the user a highly flexible and versatile platform for DC motor control.

Programming/Operator Controls

Featuring an intuitive menu structure, the ergonomically designed operator panel allows quick and easy access to all parameters and functions of the drive via a bright, easy to read backlit display and tactile keypad. Additionally, it provides local control of start/stop, speed demand and rotation direction to greatly assist with machine commissioning.

- **Multi-Lingual alpha-numeric display**
- **Customized parameter values and legends**
- **On drive or remote mounting**
- **Local control of start/stop, speed and direction**
- **Quick set-up menu**

Connectivity

Whatever the complexity of your control scheme, the DC590+ has the interface to suit. As standard there's enough analog and digital I/O for the most complex applications. Alternatively, add the relevant 'technology box' for immediate access to serial communications and Fieldbus networks. The DC590+ has been designed to fit seamlessly, and without compromise, into any control environment.

Analog/Digital Control

- **5 Analog Inputs (12bit + sign)**
- **3 Analog Outputs**
- **9 Digital Inputs**
- **3 Digital Outputs**

Serial Communications and Fieldbus Options

- **Profibus**
- **Ei Bisynch**
- **Canopen**
- **Ethernet**
- **Lonworks**
- **Devicenet**
- **RS422/RS485**
- **Modbus**
- **Controlnet**

All DC590+ units are available as non-regenerative or full 4-quadrant regenerative models

Standard 6901 MMI/Programming Keypad is easy to use, and may be remotely mounted. It is compatible with other SSD drive models.

DC590+

DC Drives - Integrator Series

DC590+ Series 2

Features and Benefits

Easy to use operator controls

- Detailed diagnostics
- Multi-language display

Advanced autotuning

Standard open fieldbuses

Configurable input-output terminal blocks

- 5 analog inputs
- 3 analog outputs
- 9 digital inputs
- 3 digital outputs

Macro function blocks

- Open-loop winder control
- Winder control - loadcell/dancer
- Section control
- Math functions
- Embedded controller functions

Worldwide product support

The DC590+ DC Drive is available with full application and service support worldwide. Wherever you are, you can be confident of full back up and support.

Rapid Commissioning, optimal control performance and easy maintenance

With its self-tuning algorithm, the DC590+ can be configured and commissioned within minutes, without turning the motor and without the need for high levels of engineering know how. The operator interface allows easy monitoring of machine operation and simplifies maintenance.

Easy integration into existing control networks

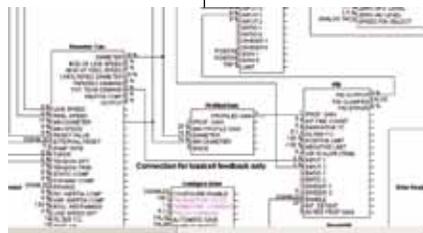

The DC590+ has a wide choice of common industry fieldbus communication options allowing seamless integration into existing factory control networks

Interfacing with existing external control equipment (Dancer, gauge, etc...)

A number of input / output options gives the DC590+ the flexibility needed for integration into any variable speed system. Combined with its embedded automation functions, its input-output configurations can in many instances eliminate the need for an external PLC.

Years of applications expertise at your service

The DC590+ macro function blocks are the result of over 30 years of experience gained by Parker SSD of installing drives in variable speed and sectional drive systems. This unique application experience is included in the drive in the form of dedicated function blocks at no extra cost, thereby reducing the design costs of your machinery.

	H (4Q)	55.4/1406	33.5/850	16.4/417

Gray panels represent footprint of DRV units for frames 3, 4, 6, and H.

Frame 1-4 have integral cooling fan assemblies where required. Optional ducting kit for cubicle roof external ventilation available for frame 4. Frame Size H has fan cooling assembly that can be cubicle roof mounted or drive mounted. Add 5.9" (150mm) to overall height for drive mounted option.

Note: Dimension table includes only the 230/460 volt ratings. Drives for a wide range of input voltages are available. For product codes, current ratings, and dimensional data on 110-220 volt, 575 volt, and 690 volt units, please consult factory. Drives of higher power ratings can also be provided upon request.

DC590+

DC Drives - Integrator Series

590DRV Series - Ready to install
1A - 2400A

The DRV is a ready to install version of the DC590+ DC Drive.

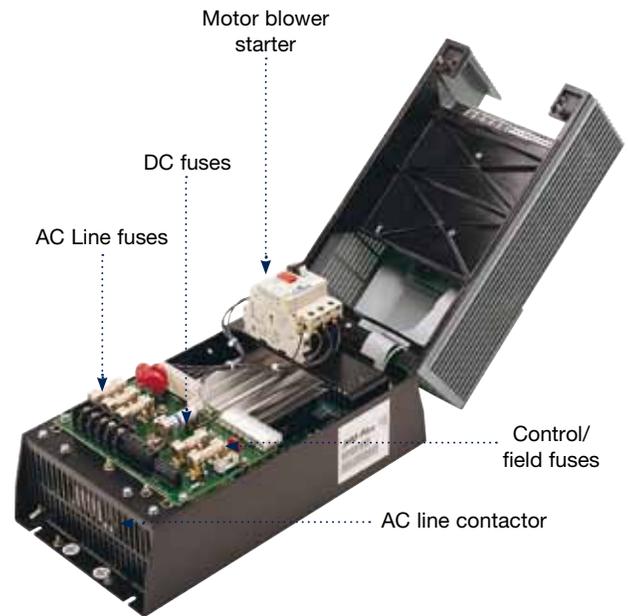

The DC590+ is available in either module, or alternatively "DRV" format up to 1750 HP. The DRV includes all the peripheral power components associated with a DC drive system integrally fitted within the footprint of the drive. DRV options include the following integrally mounted within the drive:

- AC line or DC armature contactor
- AC line fuses
- DC fuse (On regenerative version)
- Control/field fuses
- Provision for optional motor blower starter
- Provision for optional auxiliary control transformer

All of these options can be supplied pre-wired within the drive.

Advantages

- Simplified panel design
- Reduced component mounting and wiring
- Reduced design time
- Reduction of purchasing costs of individual components
- Less complexity

Traditional DC drive section

DC590+ External Stack Controller

DC598+, DC599+ Series

The unique, economical solution for retrofit applications

When upgrading machines equipped with older high power DC drives, the most cost-effective and quickest way is often to reuse the existing SCR power stack, which in most cases will be in perfect working order.

To preserve your investment, Parker SSD Drives has developed a DC598+/DC599+ power stack controller offer specially aimed at retrofit applications and based on the DC590+ controller.

Available in 2 versions, the DC599+ two quadrant non-regenerative and DC598+ four quadrant full-regenerative versions, can be used to drive the power stacks of existing DC drives manufactured by Parker SSD or other manufacturers, delivering the benefits of the recent technological innovations of the DC590+ Series 2 drive.

The DC598+ and DC599+ offer the ability to upgrade your equipment quickly and easily and integrates with your existing control equipment or SCADA package.

The DC598+ and DC599+ retrofit solutions are recommended for currents above 800A.

Benefits

Reuse existing DC power stacks

Connectivity over standard common fieldbuses (Including Profibus, Ethernet, Devicenet, CANopen)

Easy to use operator interface

Flexible common Integrator Series programming environment.

Suitable for currents up to 2700A

The DC598/9+ external stack controllers provide the following:

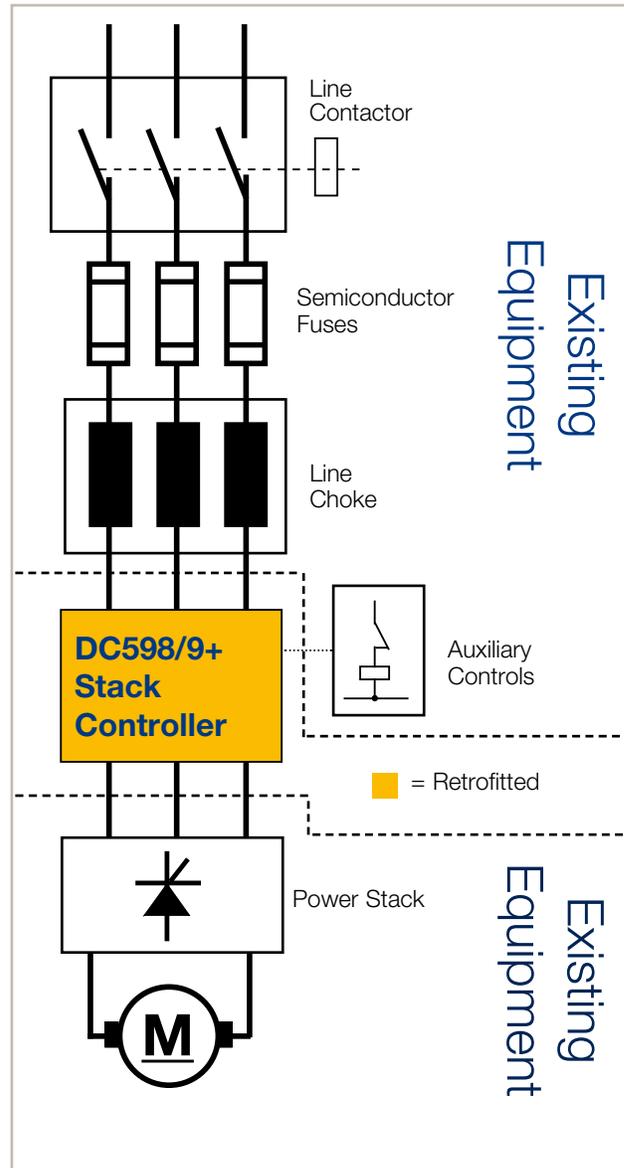

- Thyristor firing signals
- Thyristor firing pulse transformers
- AC current transformer feedback rectification and scaling
- Armature voltage feedback interface
- Coding and phase rotation interface
- Mains present monitoring
- Heatsink over-temperature input
- Field power modules and input/output terminals
- Field current monitoring and scaling
- All standard DC590+ I/O terminals

Accessories and Options

Category	Page
Operator Interface	
While every DC590+ is shipped with a keypad/display, there are several options available such as a remote keypad kit and a full featured graphical display. In addition, the TS8000 series HMI is fully compatible with the DC590+.	93
Communication Cards	
A wide variety of communications cards allow the DC590+ series drives to interface with most current and legacy SCADA networks, using both open architecture and proprietary standards. Other cards allow multiple drives to communicate with each other, peer to peer. Field or factory installed.	94
Speed Feedback Cards	
A number of option cards for popular feedback devices are offered. Field or factory installed.	95
Control Transformer	
When a source of 110V control power is needed, this option can be added to certain sizes of DC590+ DRV.	95
Blower Motor Starters	
For DC motors with force ventilation, this option provides a means of protection for the blower motor.	95
Dynamic Braking	
For applications requiring dynamic braking, pre-selected resistors are offered. The kits are designed for stopping a motor at full load current from base speed with two times motor energy, three times in rapid succession (NEMA ICS 3-302.62 dynamic braking stop option) For more frequent or continuous braking, consider a regenerative style DC590+.	96
Contactors	
To add application flexibility, contactor options are available for many DC590+ sizes.	96
Accessories - Power Quality	
Pre-selected line/load reactors and EMC filters can be provided for the DC590+ series.	112

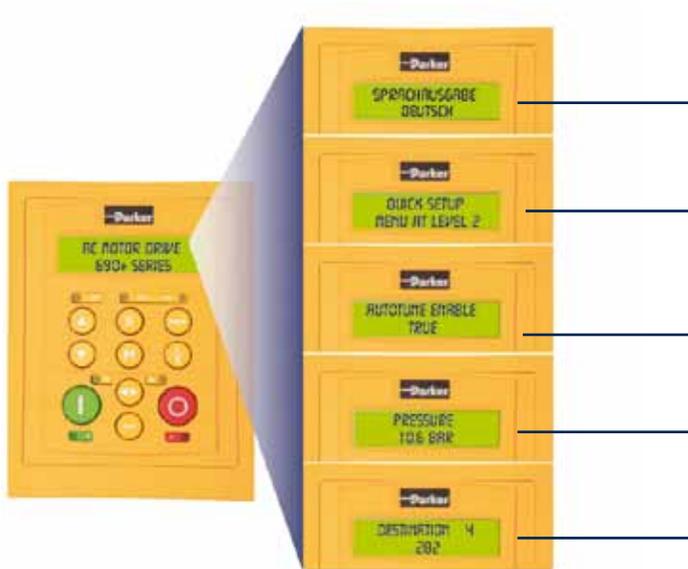

Accessories and Options

DC590+ Integrator Series 2 DC Drives Operator Interface

Standard operator keypad

Part Number	Description	Suitable for
6901/00/G	Standard Keypad	All DC590+

Features

- Local motor control: start, speed, direction, diagnostics
- Operator menus and parameter configuration
- Quick setup menu
- Password protection for parameter configuration

Multilingual

English · French · German · Italian · Portuguese · Swedish · Polish

Quick setup menu

Intuitive menus allowing easy and quick setup of the drive

Auto-tuning

Automatic tuning of motor parameters ensures maximum dynamic motor performance

Diagnostics messages

Display input and output parameters as well as drive operating units

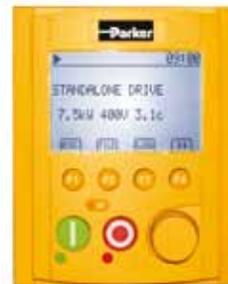

Drive configuration

Advanced operator keypad - Optional

Features

- 128 x 64 pixels semi-graphical resolution
- RS232 and RS485 ports
- Recording of parameters to keypad and restore to drive (Memory card 256Mb to 2Gb)

Part Number	Description	Suitable for
6911/01/00/G	Advanced Keypad	All DC590+

Remote Mounting Kit - Optional

Description

The optional keypad mounting kit includes bezel and lead

Part Number	Description	Suitable for
6052/00/G	Remote mounting kit	All DC590+

DC590+

Accessories and Options

DC590+ Integrator Series 2 DC Drives Communication Cards

Description

The communication cards allow the DC590+ to be connected to the most common industry standard fieldbuses.

Ethernet Communications Interface

Part Number: 6055/ENET/00	
Supported Protocols	Modbus/TCP and Ethernet IP
Communication Speed	10/100M bits/s
Station Address	Selectable via switch or Internet Explorer
Suitable for	DC590+ version 7.1+

Devicenet Communications Interface

Part Number: 6055/DNET/00	
Supported Protocols	DeviceNet Drive Profile – Group 2 slave only
Station Address	DeviceNet Drive Profile – Group 2 slave only
Suitable for	DC590+ version 5.x+

CANopen Communications Interface

Part Number: 6055/CAN/00	
Profile	DS402
Supported Messaged	SDO, PDO, NMT, SYNC
Communication Speed	20K, 50K, 125K, 250K, 500K, 1M bits/s selectable
Station Adress	Selectable via switch
Suitable for	DC590+ version 5.x+

RS485/Modbus Communications Interface

Part Number: 6055/EI00/00	
Supported Protocols	Modbus RTU, EI Bisynch ASCII
Cabling	RS485 2 or 4 wire
Communication Speed	300 to 115200 bits/s
Station Address	Selectable via software
Suitable for	DC590+ version 5.17+

Features

- Communication cards can be factory fitted or purchased separately for fitting on-site
- Dimensions H x W D: 127mm x 76.2mm x 25.4mm
- LED indication of network and card status

ControlNet Communications Interface

Part Number: 6055/CNET/00	
Supported Messages	Polled I/O
Station Address	Selectable via software
Suitable for	DC590+ version 5.17+

Modbus Plus Communications Interface

Part Number: 6055/MBP/00	
Supported Protocols	Modbus Plus
Cabling	RS485 2 or 4 wire
Communication Speed	1 M bits/s
Station Address	Selectable via software
Suitable for	DC590+ version 7.1+

Profibus-DP Communications Interface

Part Number: 6055/PROF/00	
Supported Protocols	Profibus-DP
Communication Speed	Automatically detected
Station Address	Selectable via software
Suitable for	DC590+ version 5.x+

Accessories and Options

DC590+ Integrator Series 2 DC Drives Feedback Cards

Feedback Cards

The feedback cards allows the use of various popular feedback devices on the motor to provide accurate measurement of motor speed. Encoder cards also provides power supply.

Part Number	Description
AH387775U005	Encoder Card +5VDC
AH387775U012	Encoder Card +12VDC
AH387775U015	Encoder Card +15VDC
AH387775U024	Encoder Card +24VDC

Specifications	
Maximum input frequency	100KHz
Receiver current consumption	10mA per channel
Input format	2 channel differential and quadrature
Differential input voltage	Minimum 3.5V
Encoder power output	+5V to +24V available
Power supply rating	2W maximum
Power supply load	1.4 x output power
Terminal size	16 AWG maximum
Tightening torque	0.4Nm

Feedback Devices

Part Number	Description
AH500935U001	Analog Tach Generator
AH386025U001	Plastic fiberoptic Microtach
AH386025U002	Glass fiberoptic Microtach

Control Transformer

Operates with 208 through 500 VAC input. Mounts inside Frame 1 and 2 DRV. Not required on DRV over 100 HP/460V.

Control Transformer	
Add -CX Suffix to Part Number	
Factory installed only	For Frame 1 and 2 DRV

Blower Motor Starters

The blower motor starter option uses a manual motor circuit controller to provide motor overload and branch protection for a single or three phase AC blower motor.

Blower motor starters are UL listed and CSA certified. They include Start/Stop-Reset switching with trip indication. One normally open auxiliary contact is included, wired to terminals.

Armature Contactor Options			NOTES
Part Number	HP (230V)	HP (460V)	
3-pole DC loop contactor including D/B contact			For use with DC590+ frames 1 and 2, this option provides a 3 pole DC loop contactor with dynamic braking contact to isolate the motor armature from the drive. Dynamic braking requires a D/B Resistor Kit in addition.
955+ADC30	1-7.5	1-15	
955+ADC60	10-15	20-30	
955+ADC130	20-40	40-75	
955+ADC220	50	100	
D/B contact kit			All DC590+ DRV units (except 125 and 250 HP, which include a D/B contact on the DC contactor) require a separate dynamic braking contact kit if D/B is required. Through 100 HP, the kits use a 4-pole AC contactor pre-wired to the drive terminals. 300 HP and above, kits use a single pole DC contactor that requires 120 VAC control power to close. The D/B contact must be factory installed and requires a larger panel. D/B contact kits are designed to meet NEMA D/B requirements when used with D/B resistors above.

955+DBC3000*	800-1000	1750-2000	

Application Profile

Machine Upgrade - Winder/Unwinder

DC Drive retrofit improves system performance without a complete rebuild

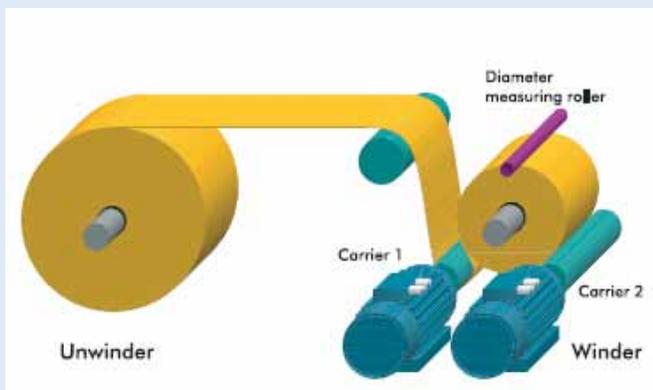

Summary

A cardboard manufacturer planned to modernize an existing two-roll surface winding system, where the front and rear winding drums were driven by DC motors. Although the existing drives were obsolete and maintenance prone, the motors in use were in good working order. The company decided that the most economical solution was to retrofit the DC drives and logic, rather than replace motors and drives with an AC system. Parker SSD DC590+ Series 2 drives provided the user with an up to date system featuring improved system reliability via fiber-optic speed feedback, system monitoring with a graphic HMI terminal, an interface with an off-the-shelf PLC solution, and a complete system solution, including on-site commissioning and startup.

Benefits

- **Cost effective approach, using existing motors with new digital DC drives**
- **Complete system solution required minimum on-site wiring and labor**
- **Fiber-optic speed coordination provided EMI immunity**
- **Improved monitoring and maintenance with complete visualization solution, web enabled to allow remote access**

Parker SSD Drives Solution

DC590+ Integrator Series 2 DC Drive

- Microtach speed feedback, fiber-optic coordination
- Function block programming

TS8000 Operator Interface

- Color touchscreen terminal for operating and monitoring the machine
- Web-based alarm and I/O status thanks to built-in web server

System Solution

- Complete system solution including climate controlled cabinet
- Programming, commissioning, and startup of new system

Application Profile

Ski Lift

Parker SSD keeps skiers heading up the mountain at minimum cost to the operator

Summary

A ski resort with a DC drive-based lift system nearing the end of its usable life, needed to refit the lift with a new drive system to minimize downtime and maximize safety. A complete retrofit of the system, including all drive and motor sections, would be prohibitively expensive. Parker SSD Drives, while fully capable of providing the new, AC drive-based system, offered a DC drive retrofit as an economical alternative without compromising safety or reliability.

The DC590+ series of digital DC drives includes the same function-block based programming tools as its AC drive counterparts, providing the same level of system control without the costly replacement of the DC motor system. The TS8000 series touchscreen interface provided the operator with simple, intuitive visual controls, allowing the user to monitor critical parameters crucial to safety.

Benefits

- **Economic replacement of old, obsolete drives with latest control technology**
- **Visual monitoring of critical parameters ensure highest safety and reliability**
- **Simple, intuitive touchscreen control with plain language display reduces operator setup and training time**
- **Redundant safeties monitor all critical parameters**

Parker SSD Drives Solution

DC590+ Integrator Series DC Drive

- Easily interfaces with existing application through function-block programming
- Retrofittable to existing motor applications
- Industry compatible I/O and communications
- Available to 2700A
- Proven technology with large installed base

Technical Support

- On-site commissioning and startup assistance
- Professional training courses available

Analog DC Drives

506/507/508 Series

Up to 2 HP/12A

Description

The 506, 507 and 508 series drives break new ground in cost-effective DC motor control. Available in 3, 6 or 12A armature ratings, the feature packed minimum footprint design is ideal for speed or torque control of permanent magnet or shunt wound DC motors fed from single phase supplies.

Typical applications include:

- Fans and pumps
- Conveyors
- Packaging machinery

Low cost high featured design

IP20 protected covers

Compact footprint and DIN rail mounting

Selectable 110V or 230V supply

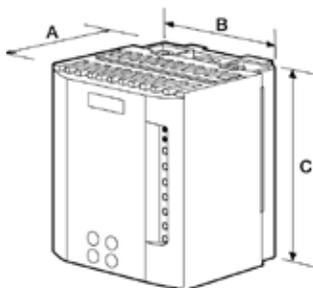

Selectable tach or armature voltage feedback

Standards

CE Marked

EN61800-3 (EMC) with external filter

EN50178 (safety, low voltage directive)

Technical Specification

Supply voltage	110-120V, or 220-240V $\pm 10\%$ single phase 50-60Hz $\pm 5\%$
Ambient conditions	0-45°C, Altitude 1000m
Installation/diagnostics	
Environment	IP20 Protection
Mounting	DIN rail
Control	Speed or torque
Output	2A DC field control
Detection	15 second stall detect
Protection	Electronic overcurrent protection
Signal	Drive healthy and zero speed
Inputs	Main and trim setpoint inputs
Ramps	Independent acceleration and deceleration ramps
Diagnostics	Via LED
Potentiometer Adjustments	
Speed	Maximum / minimum
Current limit	
Speed stability	
Time	Acceleration (1-15 seconds) Deceleration (1-15 seconds)
IR compensation	
Switch selectable	
Supply voltage	110/120V or 220/240V
Speed Feedback	Tach generator/armature voltage feedback
Calibration	Speed and Current

Characteristics

Part Number	Armature Current ADC	HP	Supply Voltage VAC	Armature Voltage VDC	Field Voltage VDC
506/03/240	3A	0.25	110-120	90	100
	3A	0.5	220-240	180	210
507/06/240	6A	0.5	110-120	90	100
	6A	1.0	220-240	180	210
508/12/240	12A	1.3	110-120	90	100
	12A	2.0	220-240	180	210

* HP Ratings are approximate and are for reference only. Always select drive based on the motor's full load armature current.

Dimensions (in/mm)

Type	A	B	C	Weight (lb/kg)
506	3.1/80	4.1/105	5.5/140	1.3/0.59
507	3.1/80	4.1/105	5.5/140	1.3/0.59
508	3.5/90	4.1/105	5.5/140	1.6/0.70

Note: Color of enclosure may vary from illustration

Analog DC Drives

512C Series

Up to 32 Amps

Technical Specifications

AC Supply Voltage Single Phase	110-115V, 220-240V or 380-415V ±10%; 50-60Hz ±5%
Ambient	0-40°C, Altitude max 1000m
Overload	150% for 60 seconds
Speed range	20:1 (arm v f/b), 100:1 (tach fb)
Voltage selection	Jumper selection of supply voltage
Control	Speed or torque
Diagnostic LED's	Power on, Stall, Overcurrent trip
Protection	Electronic overcurrent protection
Analog Inputs	Setpoint ramp 0-10V Auxiliary speed setpoint 0-10V Current limit 0-7.5V Tach gen input 0-350VDC
Analog Outputs (Buffered)	Speed 0-10V, 5mA Current 0-5V, 5mA Ramped setpoint 0-10V, 5mA
Reference supply	10VDC (5mA)
Digital Inputs (2)	Run, Stall override
Digital Outputs (2)	Drive Healthy, Zero Spd/Zero Setpt
Potentiometer Adjustments	
Speed (2)	Maximum/Minimum
Current limit	0-110%
Speed stability	
Ramp time (2)	Accel, Decel (1-40 seconds)
IR Compensation	
Zero speed offset	

Description

Isolated control circuitry, a host of features, and extremely linear control loop make the 512C ideal for single motor or multi-drive applications. The 512C is suitable for controlling permanent magnet or field wound DC motors in speed or torque control, and can be used “open loop” with armature voltage feedback, or with DC tach feedback for enhanced regulation and speed range. Chassis mount, IP00 rating.

Typical applications include:

- Centrifugal fans and pumps
- Extruders and mixers
- Conveyors

Part Number	Armature Current	HP*		
		120V Supply	230V Supply	400V Supply
512C/040/000	4A	0.25	0.5	0.75
512C/080/000	8A	0.5	1.0	1.5
512C/160/000	16A	1.0	3.0	5.0
512C/320/000	32A	2.0	5.0	7.5

* HP Ratings are approximate and are for reference only. Always select drive based on the motor's full load armature current.

Common Specifications: 512C and 514C

Voltage Ratings:

Supply Voltage	Armature Voltage	Field Voltage
110 VAC	90 VDC	3A @ 100 VDC
240 VAC	180 VDC	3A @ 210 VDC
415-480 VAC	320 VDC	3A @ 360 VDC

Standards:

CE Marked

EN61800-3 (EMC) with external filter
EN50178 (safety, low voltage directive)

Analog DC Drives

514C Series

Up to 32 Amps

Description

The regenerative 514C DC drive offers full four quadrant control of DC motors from single phase supplies. As such it is ideal for applications involving overhauling loads or where rapid and accurate deceleration is required. 514C can be used “open loop” with armature voltage feedback, or with DC tach feedback for enhanced regulation and speed range. Chassis mount, IP00 rating.

Typical applications include:

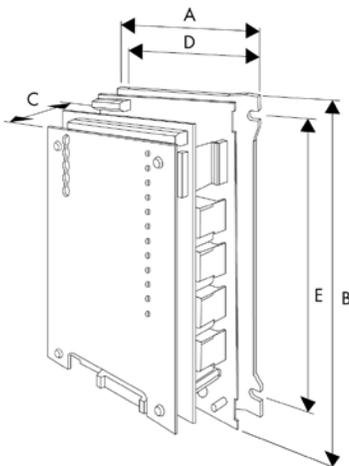

- Machine tool spindles
- Wire drawing machines
- Winders/Reelers

Part Number	Armature Current	HP*		
		120V Supply	230V Supply	400V Supply
514C/040/000	4A	0.25	0.5	0.75
514C/080/000	8A	0.5	1.0	1.5
514C/160/000	16A	1.0	3.0	5.0
514C/320/000	32A	2.0	5.0	7.5

* HP Ratings are approximate and are for reference only. Always select drive based on the motor's full load armature current.

Technical Specification

AC Supply Voltage Single Phase	110-480V ±10%; 50-60Hz ±5%
Ambient	0-40°C, Altitude max 1000m
Overload	150% for 60 seconds
Voltage selection	Jumper selection of supply voltage
Speed Control	20:1 (arm v f/b), 100:1 (tach fb)
Torque Control	2% accuracy, closed loop w/PI

Packaged Drives

AC and DC Series

0.5 HP - 500 HP

Overview

For those applications that require more than a standard drive, Parker SSD offers a unique line of configurable packaged drives designed for maximum flexibility and minimum lead time.

By choosing from a list of standard drives, pre-engineered options, and a selected group of enclosures, you can configure a packaged drive with the features you need, then receive a quick quote and part number to order. Most

packages ship in two weeks or less, built to your specifications!

Packaged drives can include any Parker SSD drive, from the economical AC650/AC650V, to the AC690+ or DC590+ Integrator Series, to the AC890/AC890PX.

Any one of a wide variety of communications cards may be chosen to match your current network. Operator devices like basic pushbuttons, selector

switches, or indicator lights are available, as are power-handling components, including circuit breakers, line contactor, output reactor, or bypass arrangements.

To get started, visit our website, www.parker.com/ssdusa and click "Packaged Drives" in the products section. Download the quote request form or complete the form on page 102 of this catalog and follow the directions to receive a fast custom quote.

Packaged Drive Benefits

- **Fast Delivery**
- **Ready-to-install standalone drive**
- **I/O interface compatible with most existing building management systems**
- **Wide range of ratings available up to 500 HP**
- **Extensive range of control options pre-engineered for fast delivery**
- **Easy commissioning**
- **Meets all relevant UL and EMC standards**
- **Economical...specify only the features you want**
- **Rugged industrial enclosures offer superior protection**

Packaged Drives

AC and DC Series

0.5 HP - 500 HP

3 Simple Steps to a Packaged Drive

1. Select the base drive model and HP rating from the Packaged Drive Quote Request Form (See page 102)

2. Select the control options and operator devices from the list of available items to suit your application

3. Submit the completed form to your local sales office or distributor for price and availability

Packaged Drives *Express* Quote Request Form

Application Profile

Hydraulic Power Unit

Parker VFD Saves on Energy Consumption and Reduces Audible Noise

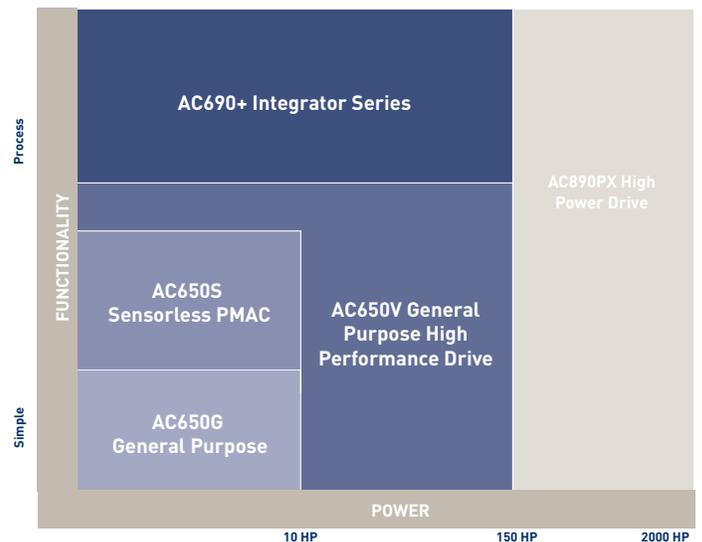

Summary

Hydraulic power units are an ideal application for Parker variable frequency drives, which can run in setpoint control mode. By receiving inputs representing flow rate or pressure, the drive can maintain just the right pump speed to accurately hold a setpoint. Higher efficiency gained by using the VFD results in less heat to be dissipated. Benefits of noise reduction and energy savings can be achieved on both variable speed pressure compensated and fixed displacement pumps.

Example of energy saving

Tests run on a hydraulic press system clearly show that substantial savings on energy are possible using the Parker variable speed drive to reduce motor speed during parts of the machine cycle with low flow demand. Plus, by over-speeding a pump at times of low pressure demand, a second pump could be eliminated. The result in this case was an average power need of just 34 HP (25kW) compared to 50 HP (38kW) using an unregulated pump, over the entire press cycle.

Parker SSD Drives Solutions

Benefits of variable speed drives in hydraulic systems

Selection of system components	<ul style="list-style-type: none"> Standard pumps can be used - fixed or variable displacement Runs three phase motor from single phase supply (limited HP range)
Smooth acceleration and braking	<ul style="list-style-type: none"> Longer motor service life, with unlimited starts per hour Less strain on the hydraulics, oil, and other components No power surges, no pressure surges (cavitation) Quick response to change in demand
Higher efficiency	<ul style="list-style-type: none"> Savings on energy consumption, reduced peak power need Less oil heating/reduced need for cooling
Compact dimensions	<ul style="list-style-type: none"> Smaller pumps and coolers needed System takes up less floor space Reduced hydraulic oil volume
Reduced noise levels	<ul style="list-style-type: none"> Less need for noise protection Improved work environment Reduced motor shaft rotations Smoothed resonant frequencies
Integrated concept	<ul style="list-style-type: none"> Less external hardware Simple customization, pre-engineered packages available Fieldbus options (Profibus, CAN, Ethernet, DeviceNet, etc.)
Frequency control	<ul style="list-style-type: none"> Higher overall system efficiency Increased productivity through higher motor speed Simple process diagnostics

Software Tools

For All Drives with communications

Drive System Explorer Software

DSE is the programming, monitoring and diagnostic software platform for SSD drives. Thanks to the on-line help, users can achieve the optimum drive configuration without the need to navigate through complicated parameter menus. Advanced programming is carried out through a set of pre-engineered templates in order to create the required configuration. It is possible to monitor every parameter of the drive either as a digital value or as a function in the “chart recorder” during normal operation.

While the drive is in running mode the oscilloscope function allows “on-line” monitoring of selected parameters and the recording of trends. Using straightforward block programming, DSE allows the user to create, parameterize and configure user defined applications thanks to function blocks dedicated to speed control, inputs, outputs, ramps, winder functions, PID, diameter calculator, and more. Groups of function blocks can be combined into macros for more complex programs.

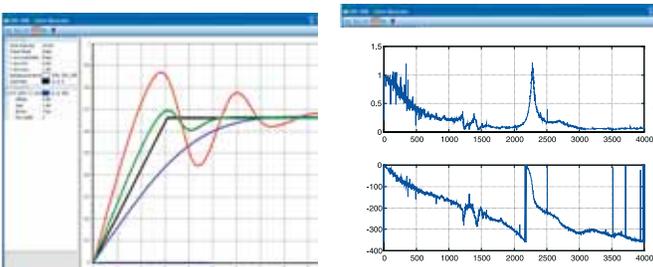

There are three levels of DSE software available.

- DSE Lite is provided as a free download, and is a fully functional package for drive programming, configuration, status monitoring, and diagnosis.
- DSE Development software adds the capability to create and edit projects using AC890 with Firewire communications.
- DSE Runtime allows the user to edit projects using AC890 with Firewire communications, but not create new ones.

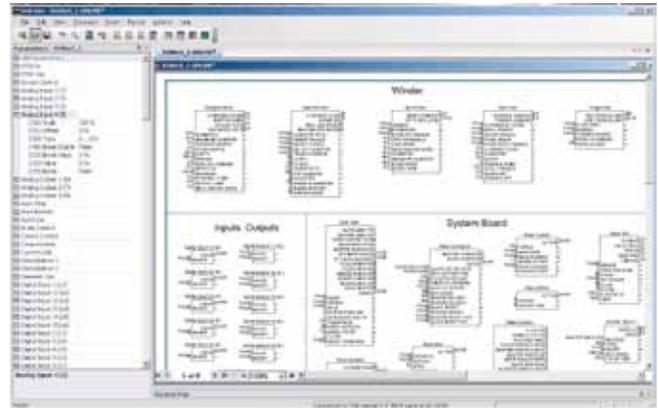

For users of DSD software who wish to migrate to the DSE platform, we offer upgrade packages for both development and runtime versions of that product.

System Requirements

- Windows Vista® or Windows® XP, Home or Professional Edition operating system
- 100Mb of free hard disk space
- USB port for connecting to an AC890 or AC890PX drive
- Serial port for connecting to AC650V, AC690+, DC590+, or legacy drives.

Real-time data acquisition and oscilloscope functions

Function block configuration

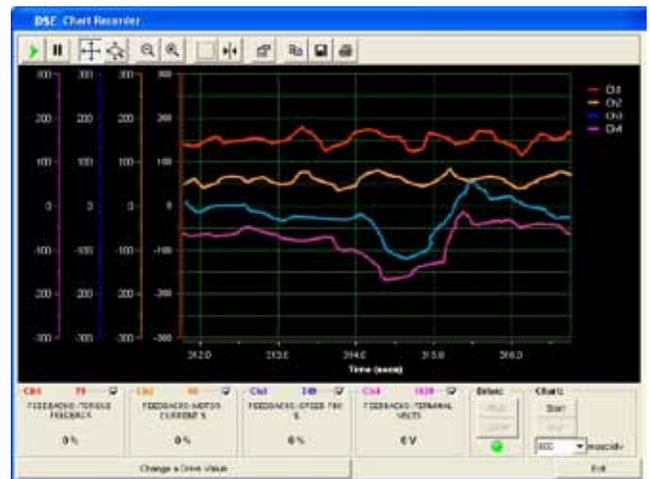

Chart recorder function

Drive System Designer (DSD)

DSD software is a package used to configure LINK systems. It employs a graphical interface and configurable function blocks that offer unlimited, interconnectable control schemes to create the desired configuration. Starting from a simple diagram of the line, machine, or process, the user can set the various parameters (line speed, tension, etc.) and functions (winder, taper, dancer, etc.) for each motor.

Part Number	Description
DSE-Lite	DSE Lite software (single axis) + USB cable*
8906-DSEDEV-00	DSE Development software + USB cable

HMI Touchscreen

TS8000 Series

Description

TS8000 is a high performance web-enabled HMI touchscreen range with powerful features that would normally only be found in PC-based displays.

The TS8000 is able to communicate with many different pieces of hardware through its 10/100Base-T Ethernet port.

Furthermore a USB programming port allows programs to be downloaded, or access to trending and data logging, while data can be collected and stored on a standard CompactFlash card, freeing up internal memory.

Unlike similar competitive units, programming software for the TS8000 is a free download!

Multi-lingual graphical interface

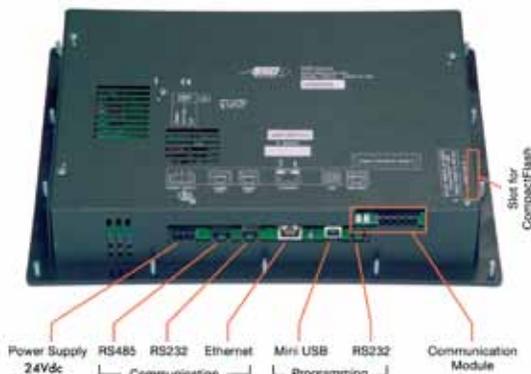

Built-in symbol library of common objects

Built-in web server/Virtual Panel

CompactFlash support

Integrated automatic multiple protocol conversion

Free DSI8000 or DSI3 programming software

Technical specifications

Power Supply	24Vdc ±20%
Operating Temperature	0-50°C

HMI Touchscreen

TS8000 Series

HMI Applications

Communication Cards

TS8000 Series

Description

The TS8000 communication cards allow connection and integration of the TS8000 into many popular fieldbus communication networks.

Features

Configuration	by means of DSI8000 configuration software
Power Supply	Connection by pluggable 3-pin terminals
Operating Temperature	0 to 50°C
Storage Temperature	-20 to 80°C
Humidity	80% max. relative humidity (non-condensing) from 0 to 50°C
Altitude	2000 meters Max.

CANopen Communications Interface

Order Code: 8000/CB/00/00

Supported Protocols	CANopen SDO Master
Communication Speed	Selectable by software up to 1 Mbits/s
Communication	With Drive System Explorer software using RTNX protocol
Suitable for drives	AC890 version 3.2+

DeviceNet Communications Interface

Order Code: 8000/DN/00/00

Supported Protocols	DeviceNet – Slave Group 2 only
Communication Speed	Selectable by software up to 500 kbits/s

Firewire Communications Interface

Order Code: 8000/FA/00/00

This card allows data exchange between the TS8000 and an AC890 fitted with an 8903/FA/00 Interface

Communication Ports	Port A : IEEE 1394A Port B : IEEE 1394B
---------------------	--

Note : The TS8000 must use a Class 2 or SELV rated power supply

Profibus-DP Communications Interface

Order Code: 8000/PB/00/00

Supported Protocols	EN50 170, 1
Communication Speed	Up to 12 Mbits/s

EMC Filters

for AC and DC Drives

Description

A range of pre-selected EMC (Electromagnetic Compatibility)/RFI (Radio Frequency Interference) Filters are available, suitable for all drives. These filters are a cost effective and easily implemented solution for the abatement of EMC in order to meet certain directives. Installation of the drive must be in accordance with the installation guidelines in the product manual.

Filters described as “footprint” type are designed to save panel space by mounting behind the drive. Filters described as “bookshelf” are designed for mounting compatibility and integration with the AC890 series frames B - D.

Drive mounted on a “footprint” filter

Ordering

Part Number	Rating	Type	Description

Three phase reactors

for AC Drives

Description

Parker's range of reactors have been especially selected to match the requirements of the Parker AC drive range and can be used on either the input or output sides of the drive. They are used to add inductance to reduce the harmonic content of the supply current. A reactor installed in the drive output limits the capacitive current when motor cable runs in excess of 50m are used. It prevents overcurrent trips and temperature rise of the motor.

In addition to helping with compliance with IEEE 519 there are other benefits to using line/load reactors including:

- Increased drive system reliability
- Reduced harmonics / surge currents
- Reduced motor noise and temperature
- Improved true power factor

For DC drive line reactors, please consult factory.

Grid Tie Inverters

for Renewable Energy

Description

One of the most important processes in any **photovoltaic (PV) solar** installation is the efficient conversion of energy generated by the arrays to a form that is compatible with the power grid. Parker SSD offers competitive solutions for every phase of solar energy – from a stand-alone grid tie inverter to a complete site-ready central station with battery storage. The combination of a highly efficient IGBT inverter design and MPP tracking makes for an energy recovery system that helps you squeeze the most out of each hour of sunlight.

In a typical **wind turbine** application, the blades rotate an induction or permanent magnet generator, either directly coupled or through a gear train. The speed of the generator will vary with wind velocity. Parker grid tie inverters effectively capture and smoothly distribute this newly generated power onto the power grid, synchronized to grid frequency at a constant 60 Hertz, regardless of wind velocity. Our inverter design has the ability to control the generator's torque and speed, and will optimize the loading of the generator to produce a constant output under fluctuating wind conditions. Integral harmonic filters ensure grid compliance by delivering pure sine wave power well within IEEE519 guidelines for Total Harmonic Distortion (THD). The efficiency of the inverter exceeds 98%, and provides a unity power factor. One properly sized AFE can support multiple inverters/generators each connected to the DC bus as one common system.

Oceans represent more than 70% of the earth's surface, but until now remained a largely untapped source of renewable energy. Parker SSD is helping to commercialize **wave power** extraction techniques that convert the waves' inconsistent flow into stable and constant power suitable for distribution to the grid.

Parker is an innovator in the field of utility scale **Energy Storage** solutions. Parker has partnered with the most advanced battery technology providers to supply utility scale grid-tied storage systems suitable for grid frequency stabilization, peak shaving, and VAR control. Among our successful installations is a 32 megawatt PCS with lithium ion batteries as the storage element.

Mobile Hardened Drives

for Hybrid and Electric Vehicles

Description

Based on robust IGBT power platforms, Parker manufactures **Mobile Hardened Inverters and Converters** for a wide range of mobile sub-systems. Applications include traction, generator APU, implement drives, export power, and auxiliary drives. Drives can be provided in heavy duty weather-tight enclosures to IP67 standards, and with automotive duty connectors to expedite installation and change-out. Air cooling, liquid cooling (water/glycol or hydraulic fluid), or an advanced 2-phase refrigerant cooling system are among the options available. Five pre-engineered frame sizes cover the wide range of common requirements, from 5 kW to 300 kW. Both AC induction and PMAC motors are compatible with these drives, and are compatible with a broad range of feedback devices. DC bus voltages through 1000 volts can be accommodated.

Motors are also available to cover the same applications and power ranges of the inverter line. Air and liquid cooled variants are offered, depending upon the size and required duty of the motor. This family also includes generators, which are an essential part of the auxiliary power unit (APU) in a series hybrid design.

Mobile electric and hybrid electric platforms require a substantial amount of **energy storage**, especially where engine-off operation of implements or export power is required. We provide pre-engineered mobile hardened battery racks, using a variety of standard cell types from traditional lead-acid to advanced Lithium Ion. A battery management system (BMS) ensures safety and battery longevity, and can be included in these energy storage units.

Applications such as front-end loaders, excavators, and aerial lift trucks require hydraulics for the operation of implements, satisfying anti-idling laws and the desire to reduce fuel consumption and emissions. Combining Parker's expertise in hydraulics, motors, and electronics results in the EHP (Electro-hydraulic pump) an efficient and flexible solution, available from 10 kW to 100 kW.

AC Motors

Inverter and Vector Duty - Compatible with AC650/V, AC690+, AC890, AC890PX
1 - 500 HP

Description

Parker SSD can provide Inverter Duty and Vector Duty motors that let you get the most out of your drive. With your choice of a wide variety of frame styles, every rating includes specific features demanded by high performance drive applications.

Cast iron frames with totally enclosed non-ventilated construction are available for harsh environments, while compact laminated frame designs with forced ventilation can fit into the tightest spaces while providing 1000:1 constant torque speed range and excellent dynamic performance.

Not all motors are created equal. Don't settle for a re-rated constant speed motor for variable speed applications. All Parker SSD Inverter and Vector Duty motors are provided with insulation that is suitable for use with IGBT based PWM drives, and with 200% torque overload capability. Ask for a performance matched package every time.

RPM AC™ Product Features

The RPM AC™ series of AC motors was designed specifically for optimum inverter duty performance, and offers high performance over a wide speed range. The compact, square cross-section, laminated steel frame includes cast iron brackets with feet for maximum ruggedness and stability. The unique low inertia design allows fast acceleration and high dynamic response. And to assure long and reliable motor life, Corona-Free insulation is used on all RPM ACTM ratings.

- Unique square laminated steel frames (FL210 - L440)
- Most compact, lightest weight
- Cast iron feet and end brackets
- Wide constant HP range - 4:1 to 12:1 available
- Low inertia design for faster dynamic response
- Replace DC motors with minimal mechanical issues
- Corona free insulation system
- Force ventilated open and enclosed blower cooled frames

Available enclosures:

DPG-FV (Drip-Proof Guarded Force Ventilated) - IEC IP23/IC06. Motor cooling is provided by motor-mounted blower driven by an integrally mounted three-phase blower motor.

TEBC (Totally Enclosed Air-Over Blower-Cooled) - IEC IP44/IC416. In-line blower cooled motors incorporate unique integral air ducts in the frame, external to the windings. The integrally mounted, independently powered three phase blowers result in low noise levels over wide speed ranges.

TEFC (Totally Enclosed Fan-Cooled) - IEC IP44/IC411. Exterior surface cooled by external fan mounted on motor shaft.

Encoders: Motors above are available with an encoder suitable for use with Parker SSD AC drives. On some ratings, the encoder is an option, while on others it is provided as standard equipment. The standard encoder is a 1024 PPR quadrature style with mating connector. Please inquire if you have any special encoder requirements.

V*S Master™ Product Features

For applications in tougher environments, we offer V*S Master™, featuring cast iron frame and end shields. Overload is no problem, with 200% capability for 60 seconds. Corona-Free insulation and an insulated CE bearing extend lifetime.

- Cast iron frames and end brackets
- Corona free insulation system
- 200% overload torque for 1 minute
- Three thermostats
- Constant HP to 1.5 times base speed
- Class F insulation
- Stainless steel nameplate
- Re-greaseable bearings
- TEFC ratings provide continuous full load torque from 0 to base speed
- CSA certified and UL recognized

DC Motors for use with Parker SSD DC Drives can also be provided. Please discuss your requirement with your SSD Drives territory manager, or with your local Parker distributor.

Parker NX motors are the ideal complement to AC650S drives in applications where space and energy savings are needed.

- Compact dimensions and robust design
- Large set of options and customization possibilities
- Also available: EX series motors for hazardous atmospheres
- High-speed variant up to 17000 RPM
- CE and UL variants

Cables can be delivered with other lengths; add (or subtract) the cable price per meter.

PMAC Torque motors

TMW Series

1200 - 22,100 Nm

Description

Parker TMW Torque Motors are innovative direct drive solutions based on permanent magnet brushless technology. Designed with a high pole count for high torque, low speed operation, they advantageously replace traditional gearbox based systems in many applications. In addition to motor-ing applications, the TMW series is also an effective generator solution for applications in renewable energy, like wind and wave power. The Direct Drive advantages result in more compact, more efficient, quieter and virtually maintenance free drive systems.

The TMW series is well suited to extruder and injection molding applications. Developed in collaboration with machine builders and end-users, a number of innovative, dedicated features have been integrated into the motors, such as a generously sized, integrated thrust bearing to support back pressure from the screw, as well as specific mechanisms allowing quick and easy removal of the screw from the motor. Delivering torques up to 22,100 Nm, at speeds ranging from 50 to 500 rpm, Parker torque motors represent the perfect alternative to gearbox based systems for extruders applications of power up to 320 kW (400 HP).

Energy savings

Removal of the gearbox has an immediate impact on the overall installation's efficiency, resulting in energy savings.

Example :

- 150 HP extruder,
- 7200 hours annual operation
- Energy cost: \$0.10/kWh

Estimated overall efficiency improvement due to the installation of a torque motor: 5%

Annual estimated savings: \$4000

Features

- High power compact design
- Water or natural cooling
- Overtemperature protection built in
- Wide range of feedback devices
- Integrated thrust bearing
- Customizable shaft ends

Technical specifications

Motor type	Permanent-magnet synchronous motor
Magnet material	Nd-Fe-B
Number of poles	24, 36 or 48
Torque range	1200 – 22100 Nm (water-cooling)
Shaft heights	200, 315 or 400 mm
Rated Voltage	400 VAC and 480 VAC
Speed	50 – 500 rpm (size dependent) - Field weakening operation up to $1.2x n_{rated}$ - Other speeds available on request
Cooling	Water Jacket as standard Natural ventilation with derating (consult factory)
Connections	Terminal box for power cable, PTC probes and KTY sensors, connector for encoder signals
Ambient operating temperature range	0°C to 40°C
Storage temperature	-20°C to 60°C
Mounting	IMB3, IMB5 (EN60034-7)
Vibration severity	Grade N
Paint finish	Black
Protection degree	IP54
Thermal protection	1 x KTY sensor and 2 x PTC probes - Temperature alarm and default
Shaft end	Hollow shaft with keyway as standard - Customized interfaces available on request
Thrust bearing	SKF 294__E as standard
Feedback sensor	Endat Encoder as standard Direct Endat Encoder with hollow shaft (option) Resolver (option)
