Excavators

Electronic Controls Division

Electronic controls and solutions for excavators

Parker – an experienced partner at your service

Market Knowledge and Solutions

Parker Electronic Controls Division's commitment to the excavator industry is clearly demonstrated by the products, the solutions, and the customer service provided. Parker ECD has successfully integrated products that address the needs of excavator manufacturers for many years. We offer innovative solutions for operator displays, and CAN based control systems that increase productivity and optimize fuel consumption.

Value in Use

Parker has dedicated teams of specialists working globally to design systems, sub-systems and solutions to meet the most demanding requirements. Among the many immediate value adding benefits realized are; increased productivity, reduced production time, reduced fuel consumption and emissions, and reduced down time.

Certified Electronics

Parker offers comprehensive control systems specifically designed for the mobile industry, fulfilling the latest standards for safety and environmental protection. User-friendly application software tools are used to build up the complete system. The modules communicate via CAN bus, allowing different gateways to other systems. All of Parker's extensive knowledge and experience in motion control on mobile units is built in, providing optimum control and flexibility as well as on-board and remote diagnostics capabilities.

FP2000 and FP3000 ferrous proximity switches detect door closure.

CM3620 control module is an input/output controller that monitors digital, analog, and frequency inputs and controls solid state switched outputs. Integrated CAN ports reduce wiring harness costs and installation costs.

LF700 fuel level sensor monitors diesel fuel tank.

DPE70 7" full color display with CAN provides a clear interface for the operator to see the status of the boom, system, engine and hydraulics operation, as well as error messages.

Compact linear lever LST offers smooth auxiliary control function with a small footprint on the operator console.

RM50 tamper resistant tilt switch indicates hood or access panel position to lock out functions for safer machine maintenance.

Monitoring engine loading and hydraulic pressure allows the control system to improve digging productivity while working to optimize fuel consumption.

Control System, Summary

- Remote diagnostics
- Simple fault finding
- Logging functions
- Reduced power consumption
- Load dependent ramps
- Simplified controls
- Modular system architecture

Horsepower Control

- Engine RPM
- Hydraulic pressure

Reduce fuel consumption, improve productivity

- J1939 throttle control to match hydraulic loading
- Hydraulic system control to match engine loading
- Accurate control of multiple fans, electric or hydraulic
- Control of AC/DC driven functions to reduce engine loading

The Electronic Controls Division has global capabilities and extensive design and manufacturing expertise. Our in-depth understanding of mobile electronics makes us ideally suited to offer full, mobile electronic systems for excavators.

Engineering Your Success

With intelligent and innovative solutions.

Whether for off-highway equipment or over the road truck and bus applications, Parker's Electronic Controls Division offers full system solutions and products to fit your needs. With worldwide engineering and manufacturing capabilities, the Electronic Controls Division has the experience, skills, and capabilities to provide solutions for virtually any mobile electronic application.

If you would like to discuss your mobile electronics applications, and how Parker's Electronic Controls Division can offer you a competitive advantage, please feel free to contact us.
